git & golang book

Read golang book and work with git

golang book

AN INTRODUCTION TO PROGRAMMING IN GO

CALEB DOXSEY

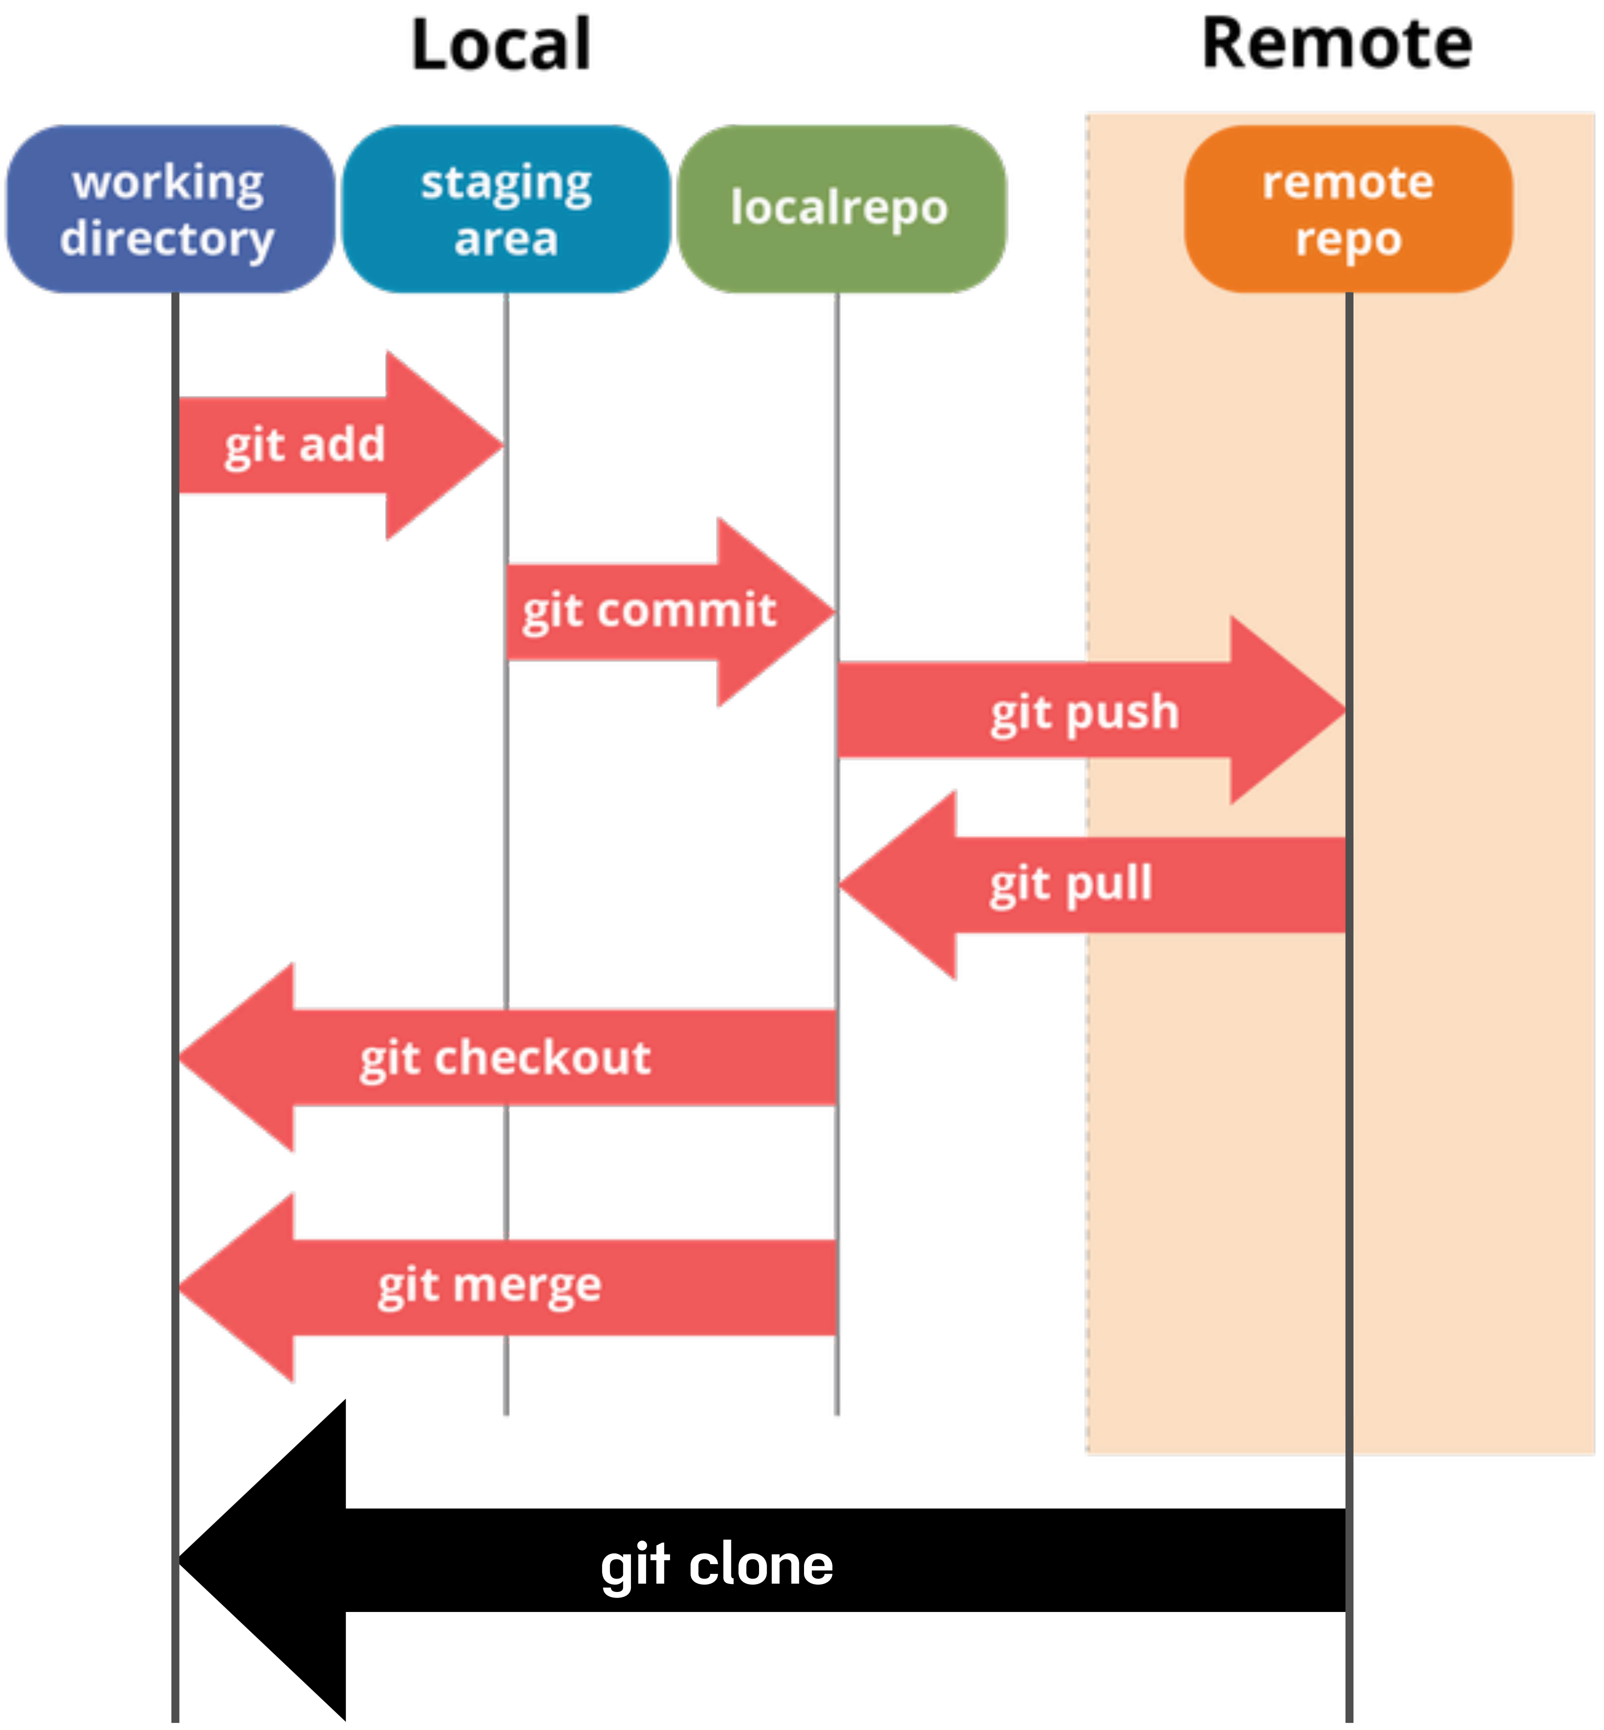
git

github account:

https://github.com/[yourname]

example:

https://github.com/boyone



Local
Remote
working directory
staging area
localrepo
remote repo
git add
git commit
git push
git pull
git checkout
git merge
git clone

Clone go-101

clone go-101 to your workspace:

```
>git clone https://github.com/boyone/go-101.git
```

golang book [1]

make working directory: [windows]

```
>md src\dojo\golang-book
```

make working directory: [linux/Mac]

```
>mkdir -p src/dojo/golang-book
```

golang book [2]

go to golang-book directory:

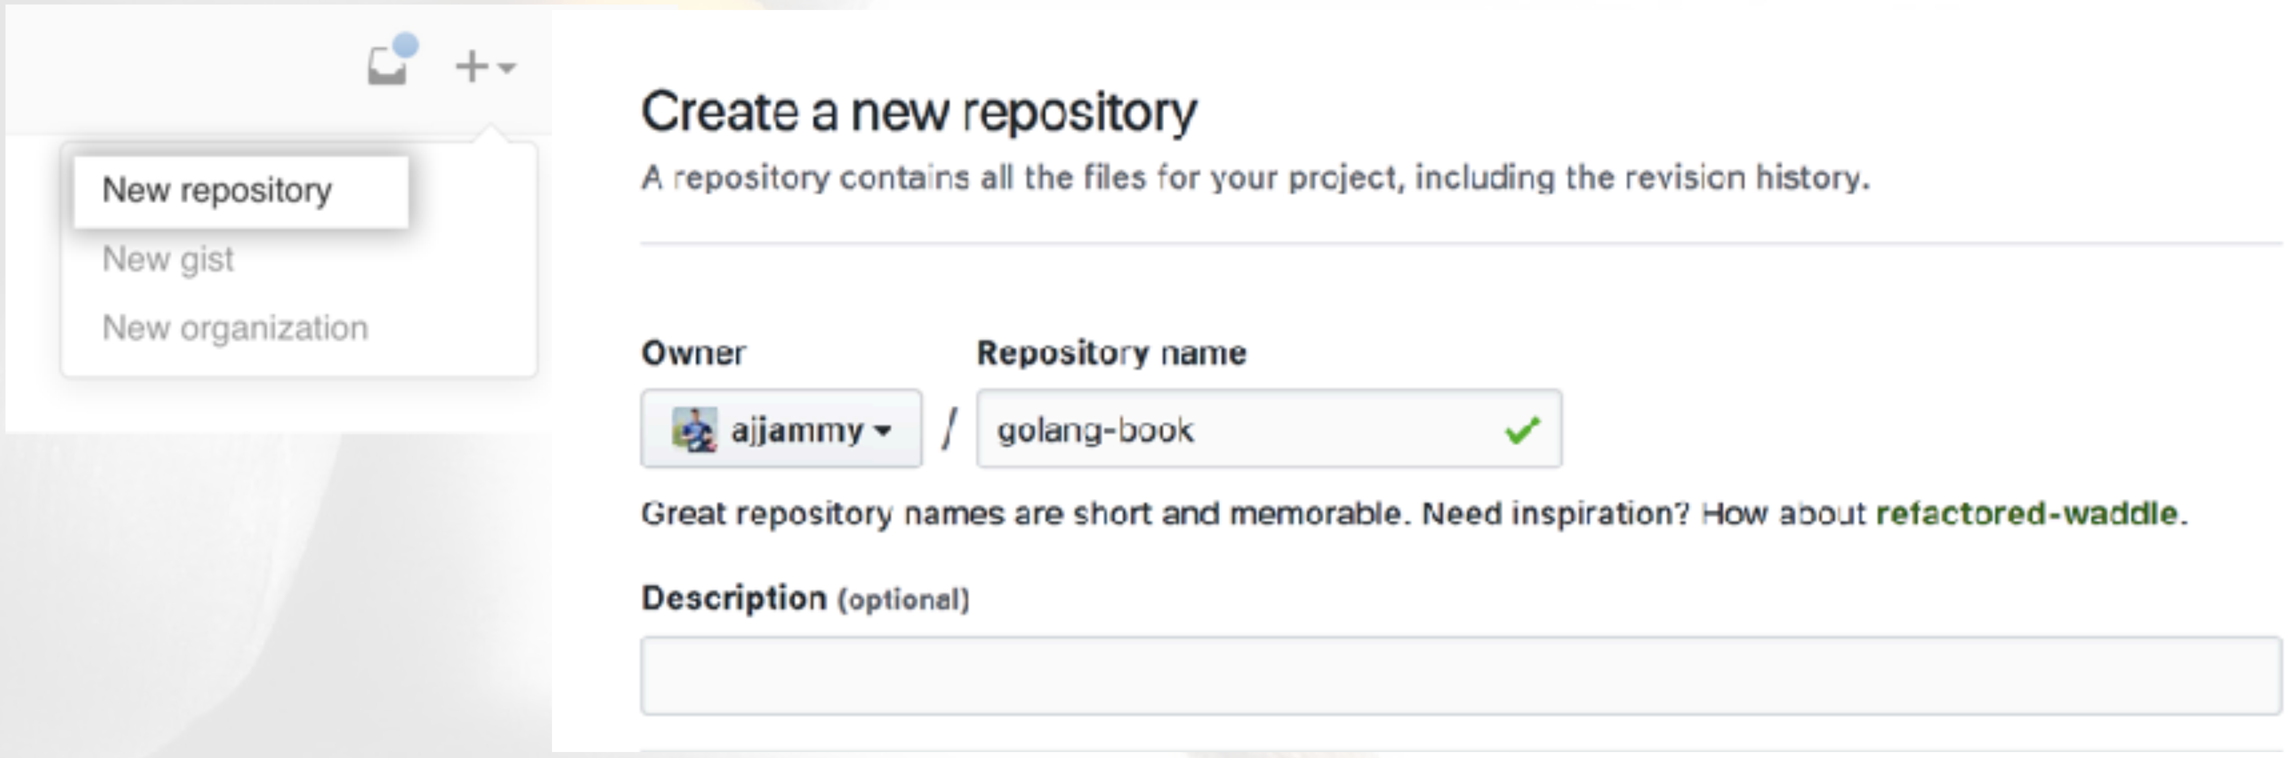
```
>cd src\dojo\golang-book
```

git init for golang-book directory:

```
>git init
```

golang book [3]

create github repository:



Create a new repository

A repository contains all the files for your project, including the revision history.

Owner: ajjammy / Repository name: golang-book

Great repository names are short and memorable. Need inspiration? How about refactored-waddle.

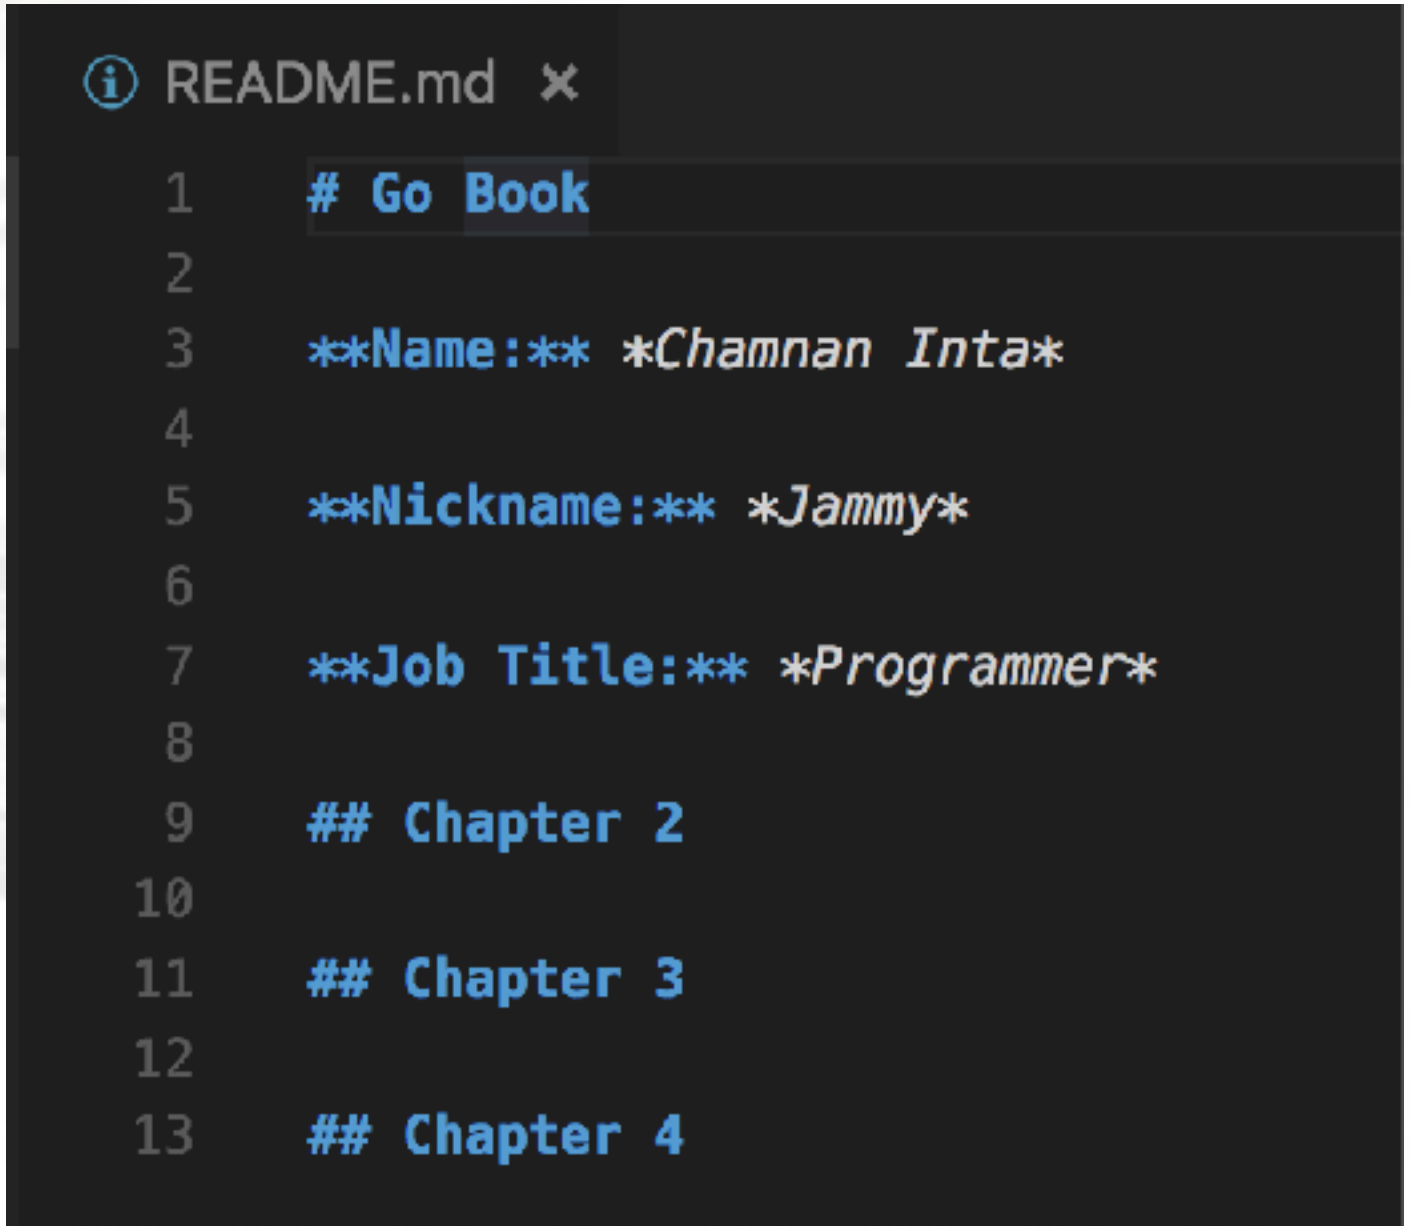
Description (optional)

add remote:

```
>git remote add origin https://github.com/<user>/golang-book.git
>git remote -v
```

golang book [4]

create README.md file:



```
# Go Book

**Name:** *Chamnan Inta*

**Nickname:** *Jammy*

**Job Title:** *Programmer*

## Chapter 2

## Chapter 3

## Chapter 4
```

golang book [5]

git add / git commit :

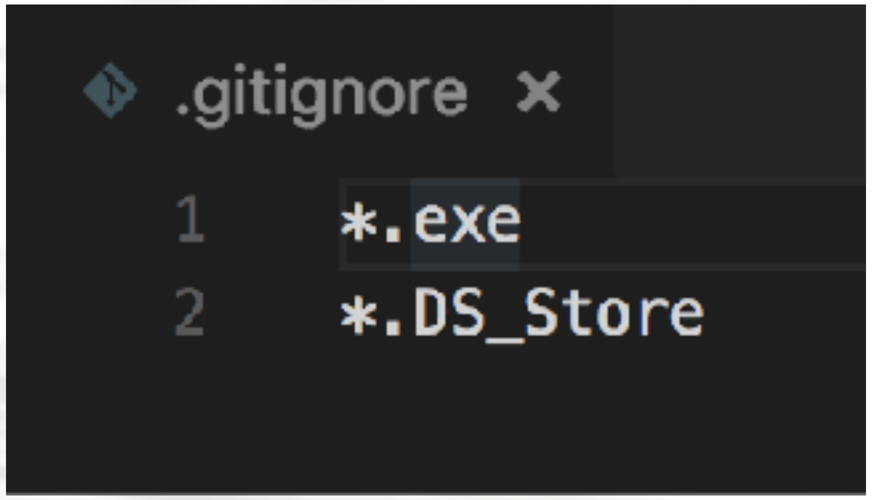
```
>git add README.md
>git commit -m “Add README.md file”
```

git push

```
>git push -u origin master
```

golang book [6]

create .gitignore file:



```
*.exe
*.DS_Store
```

golang book [7]

git add / git commit :

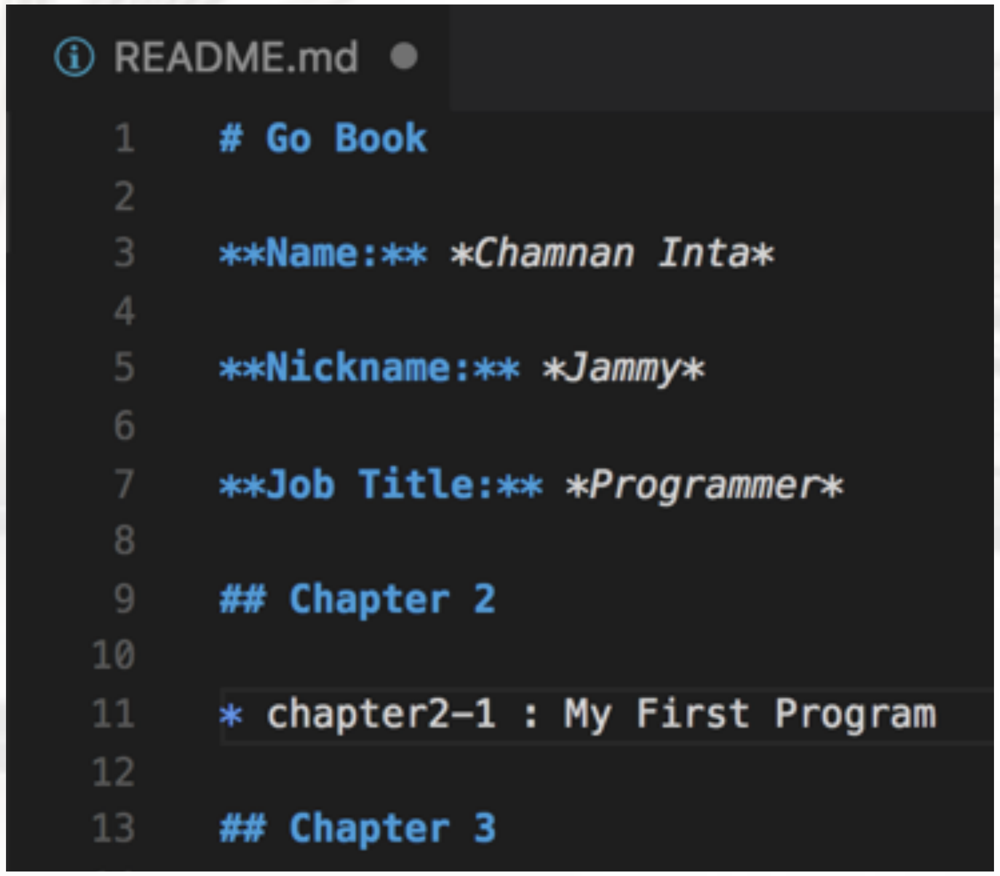
```
>git add .gitignore
>git commit -m “Add .gitignore file”
```

git push

```
>git push
```

golang book [8]

1. Read book chapter 2
2. Update README.md
3. Create main.go file at directory golang-book/chapter2-1



```
# Go Book

**Name:** *Chamnan Inta*

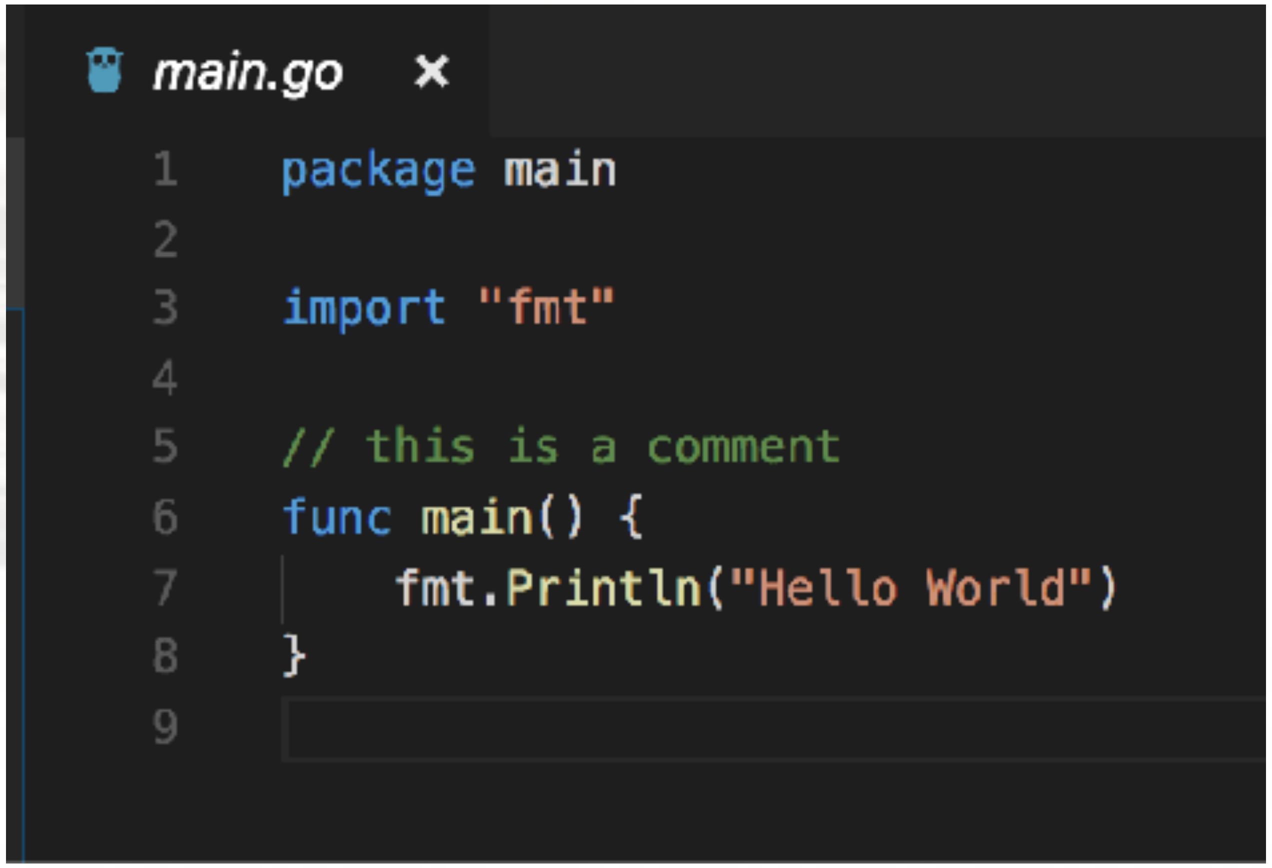
**Nickname:** *Jammy*

**Job Title:** *Programmer*

## Chapter 2

* chapter2-1 : My First Program

## Chapter 3
```



```go
package main

import "fmt"

// this is a comment
func main() {
    fmt.Println("Hello World")
}

```

golang book [9]

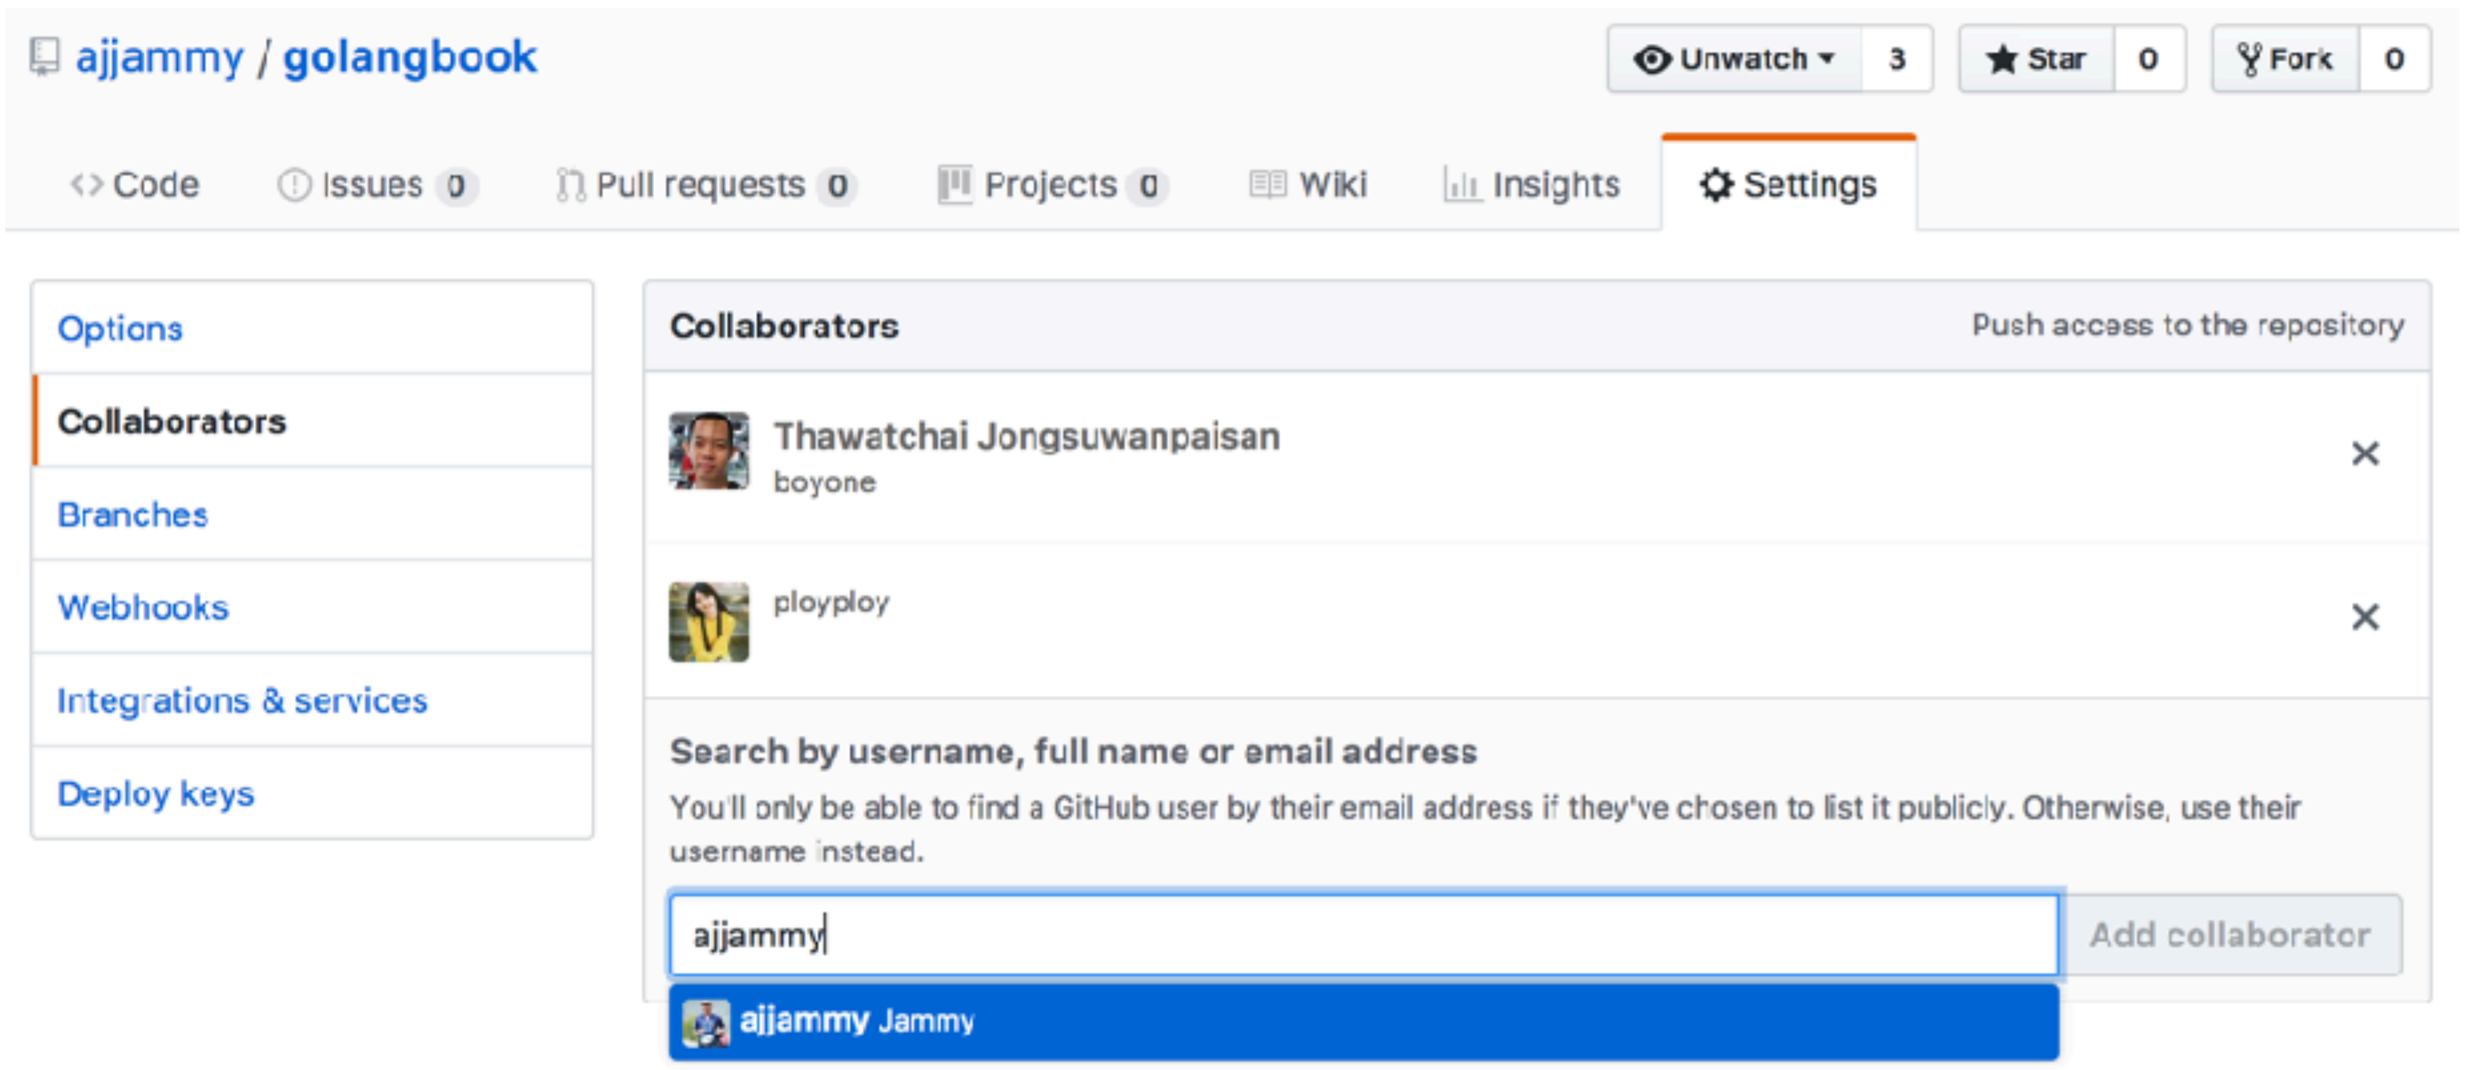
git add / git commit :

```
>git add .
>git commit -m “Add chapter2-1 My first program”
```

git push

```
>git push
```

add collaborators



Collaborators — Push access to the repository

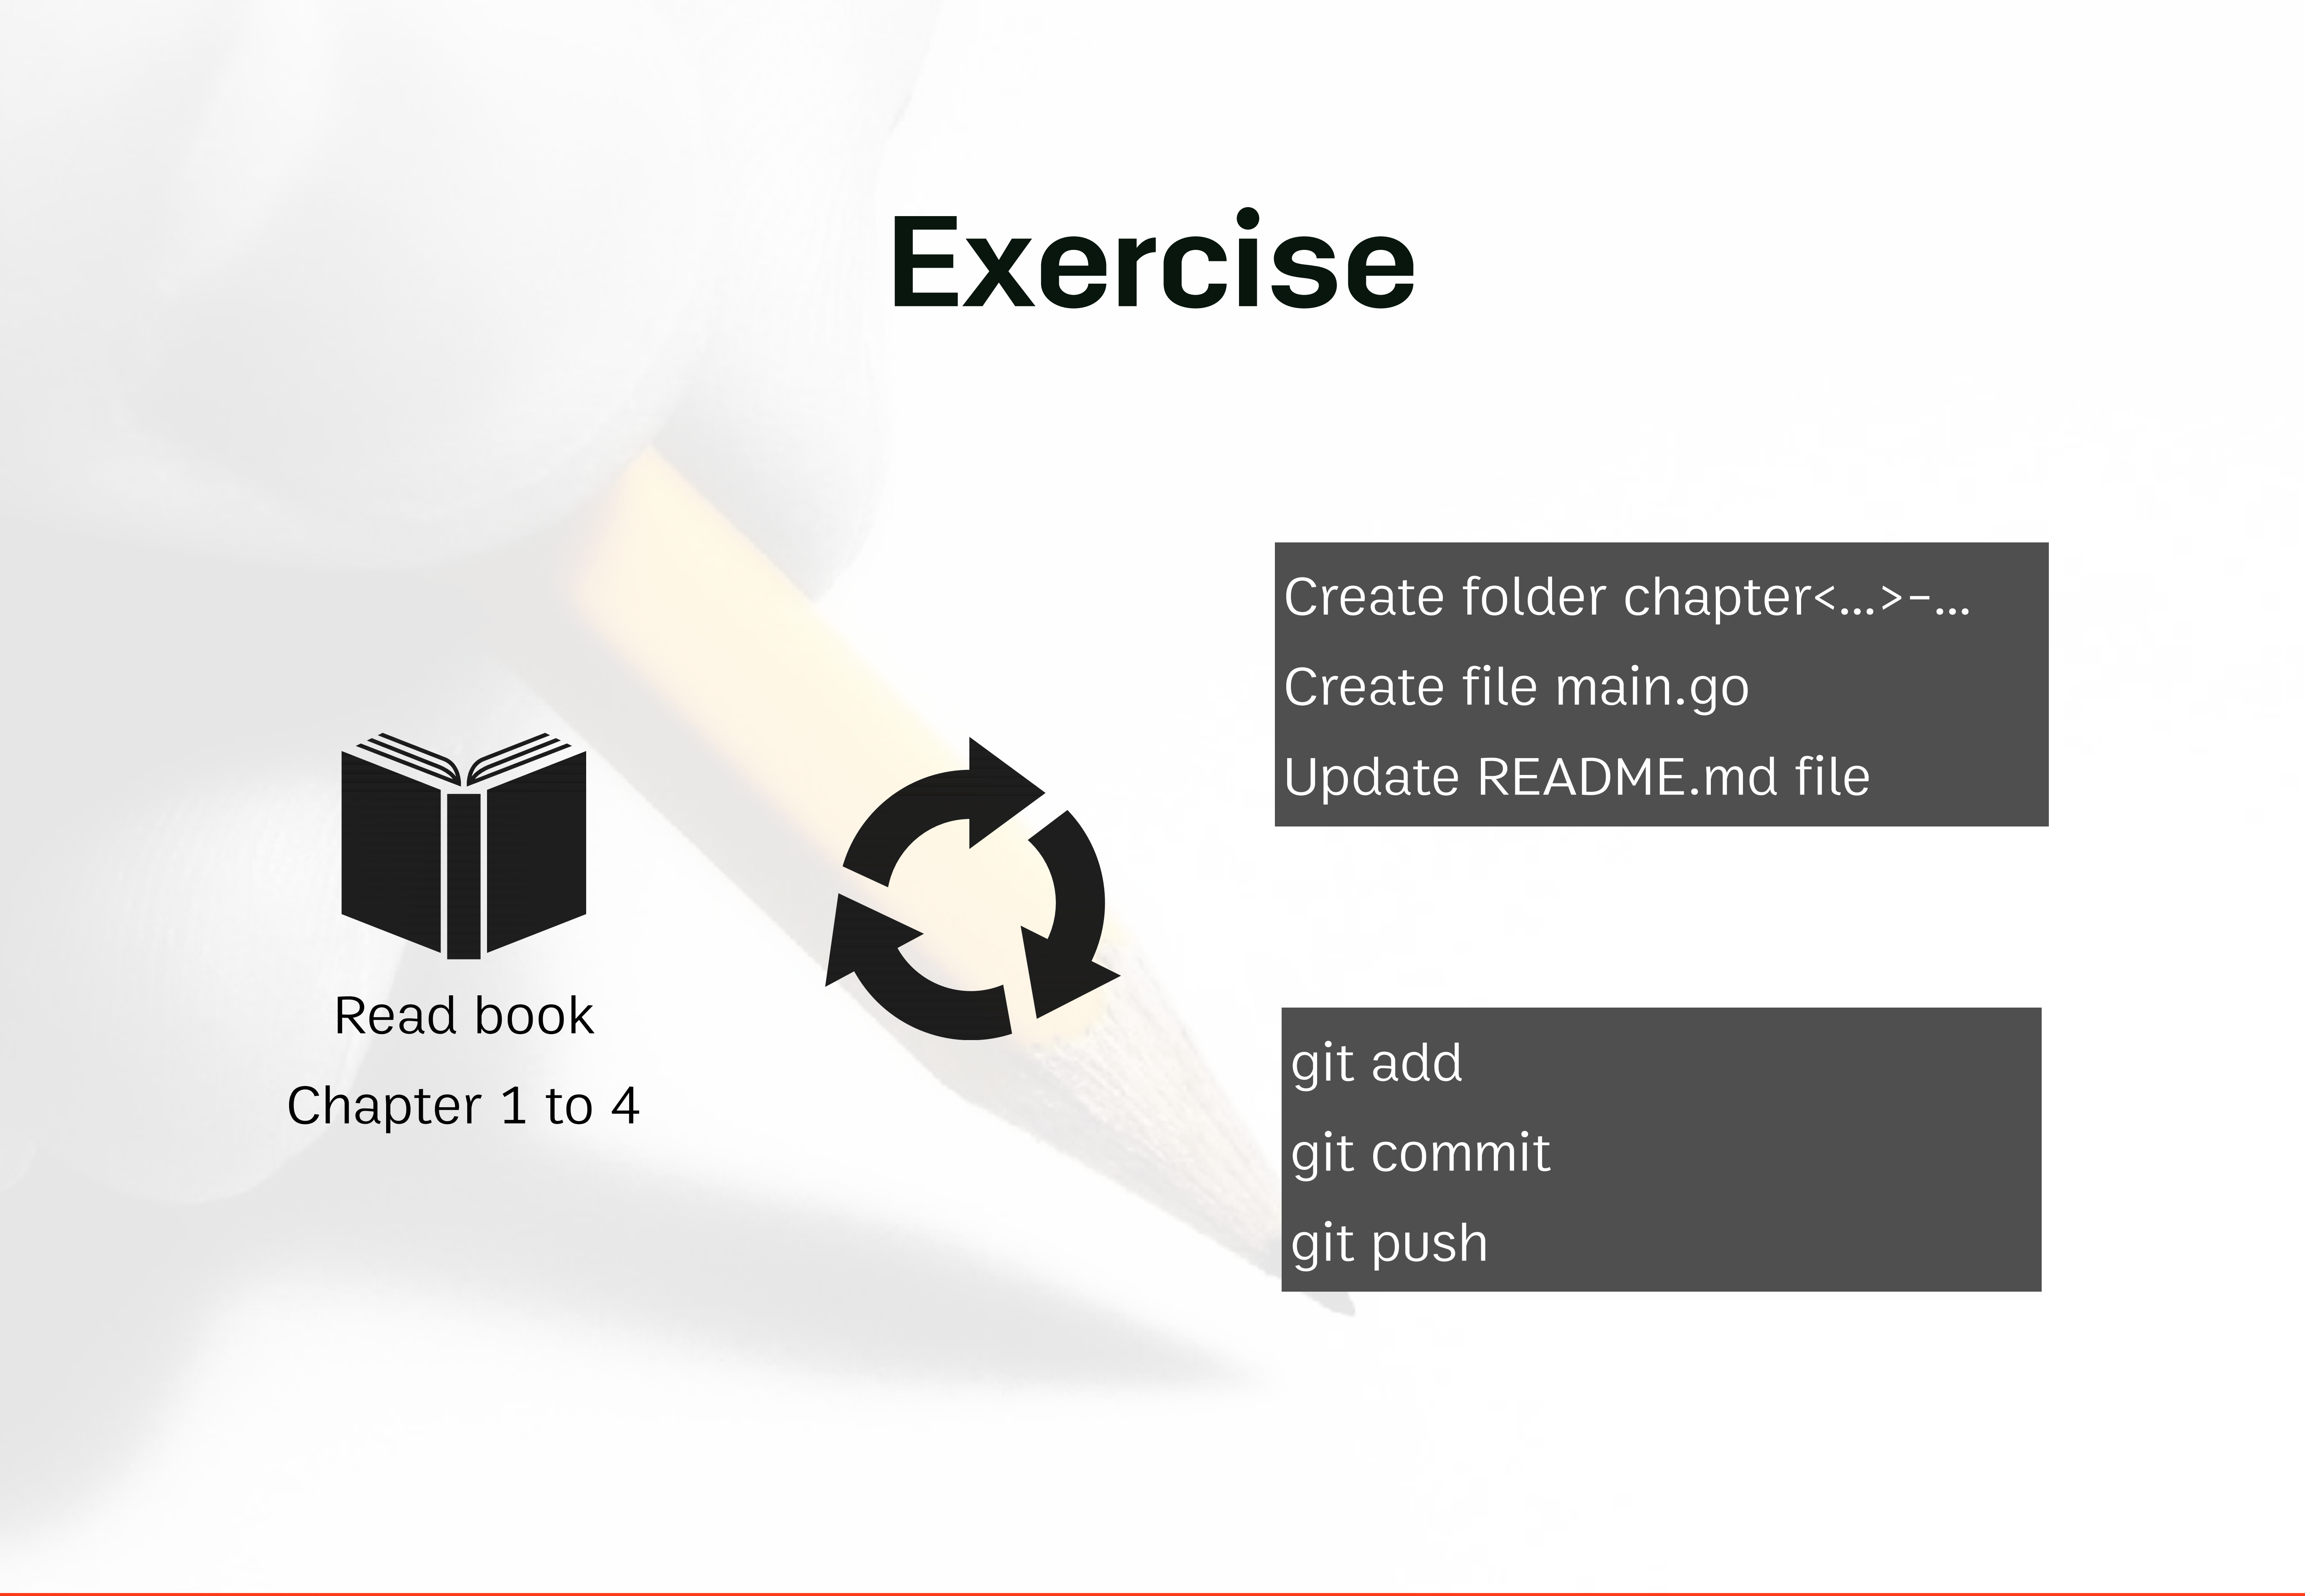
ployploy

Search by username, full name or email address

You'll only be able to find a GitHub user by their email address if they've chosen to list it publicly. Otherwise, use their username instead.

ajjammy

ajjammy Jammy



Exercise

Read book

Chapter 1 to 4

Create folder chapter<...>-...

Create file main.go

Update README.md file

```
git add
git commit
git push
```

Type

golang : type Zero Value

```go
package main

import "fmt"

func main() {
    fmt.Println("=====Zero Value=====")
    var number int
    var str string
    var boolean bool
    fmt.Printf("number: %v\n", number)
    fmt.Printf("str: '%v'\n", str)
    fmt.Printf("boolean: %v\n", boolean)
}
```

golang : type Strings

```go
package main

import "fmt"

func main() {
    fmt.Println("=====String=====")
    backticks := `hello world!,
today's good day.`
    fmt.Println(backticks)

    doubleQuotes := "hello world!,\ntoday's good day."
    fmt.Println(doubleQuotes)
}
```

golang : type Floating point [1]

```go
package main

import "fmt"

func main() {
    fmt.Println("=====Floating point=====")
    third := 1.0 / 3.0
    fmt.Printf("third = %v\n", third)
    fmt.Printf("third + third + third = %v\n", third+third+third)
}
```

golang : type Floating point [2]

```
package main

import "fmt"

func main() {
    fmt.Println("=====Comparing floating point=====")
    fmt.Println("0.1 + 0.2 == 0.3 is", 0.1+0.2 == 0.3)
    num := 0.1
    num += 0.2
    fmt.Println("num == 0.3 is", num == 0.3)
    fmt.Println("num is", num)
}
```

Variables

golang : Variables [1]

create main.go in folder chapter4-1 :

```
package main

import "fmt"

func main() {

}
```

run -> no error -> push to your git repository

golang : Variables [2]

create main.go in folder chapter4-2 :

```go
package main

import "fmt"

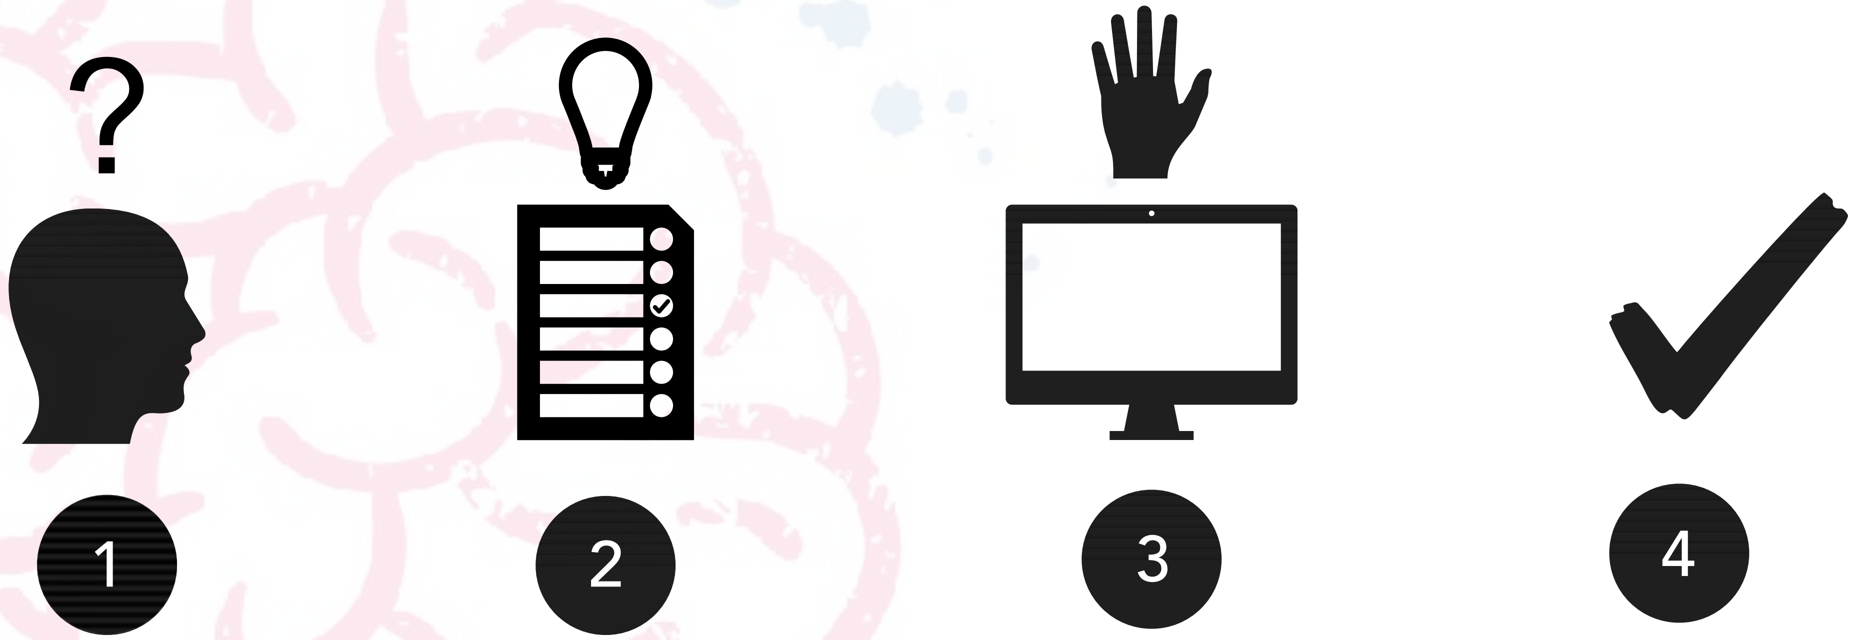
func main() {
    fmt.Print("Enter a number: ")
    var input float64
    fmt.Scanf("%f", &input)
    output := input * 2
    fmt.Println(output)
}
```

run -> no error -> push to your git repository

Exercise

Modify main.go in folder chapter4-2 for solve

Problem No.5 of Chapter 4 :

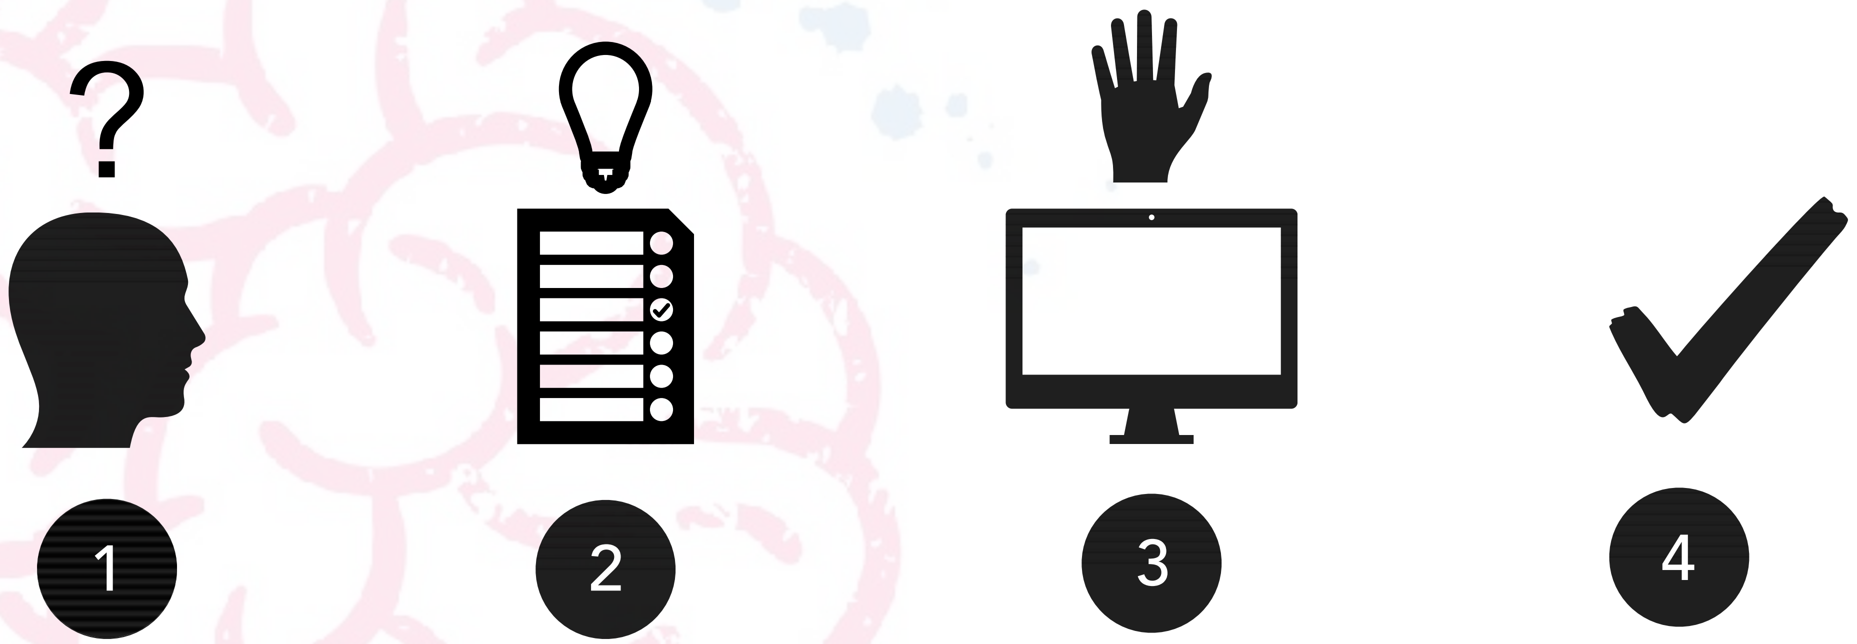


run -> no error -> push to your git repository

Exercise

Create main.go in folder chapter4-3 for solve

Problem No.6 of Chapter 4 :



run -> no error -> push to your git repository

Conditions

golang : Conditions

create main.go in folder chapter5-1 :

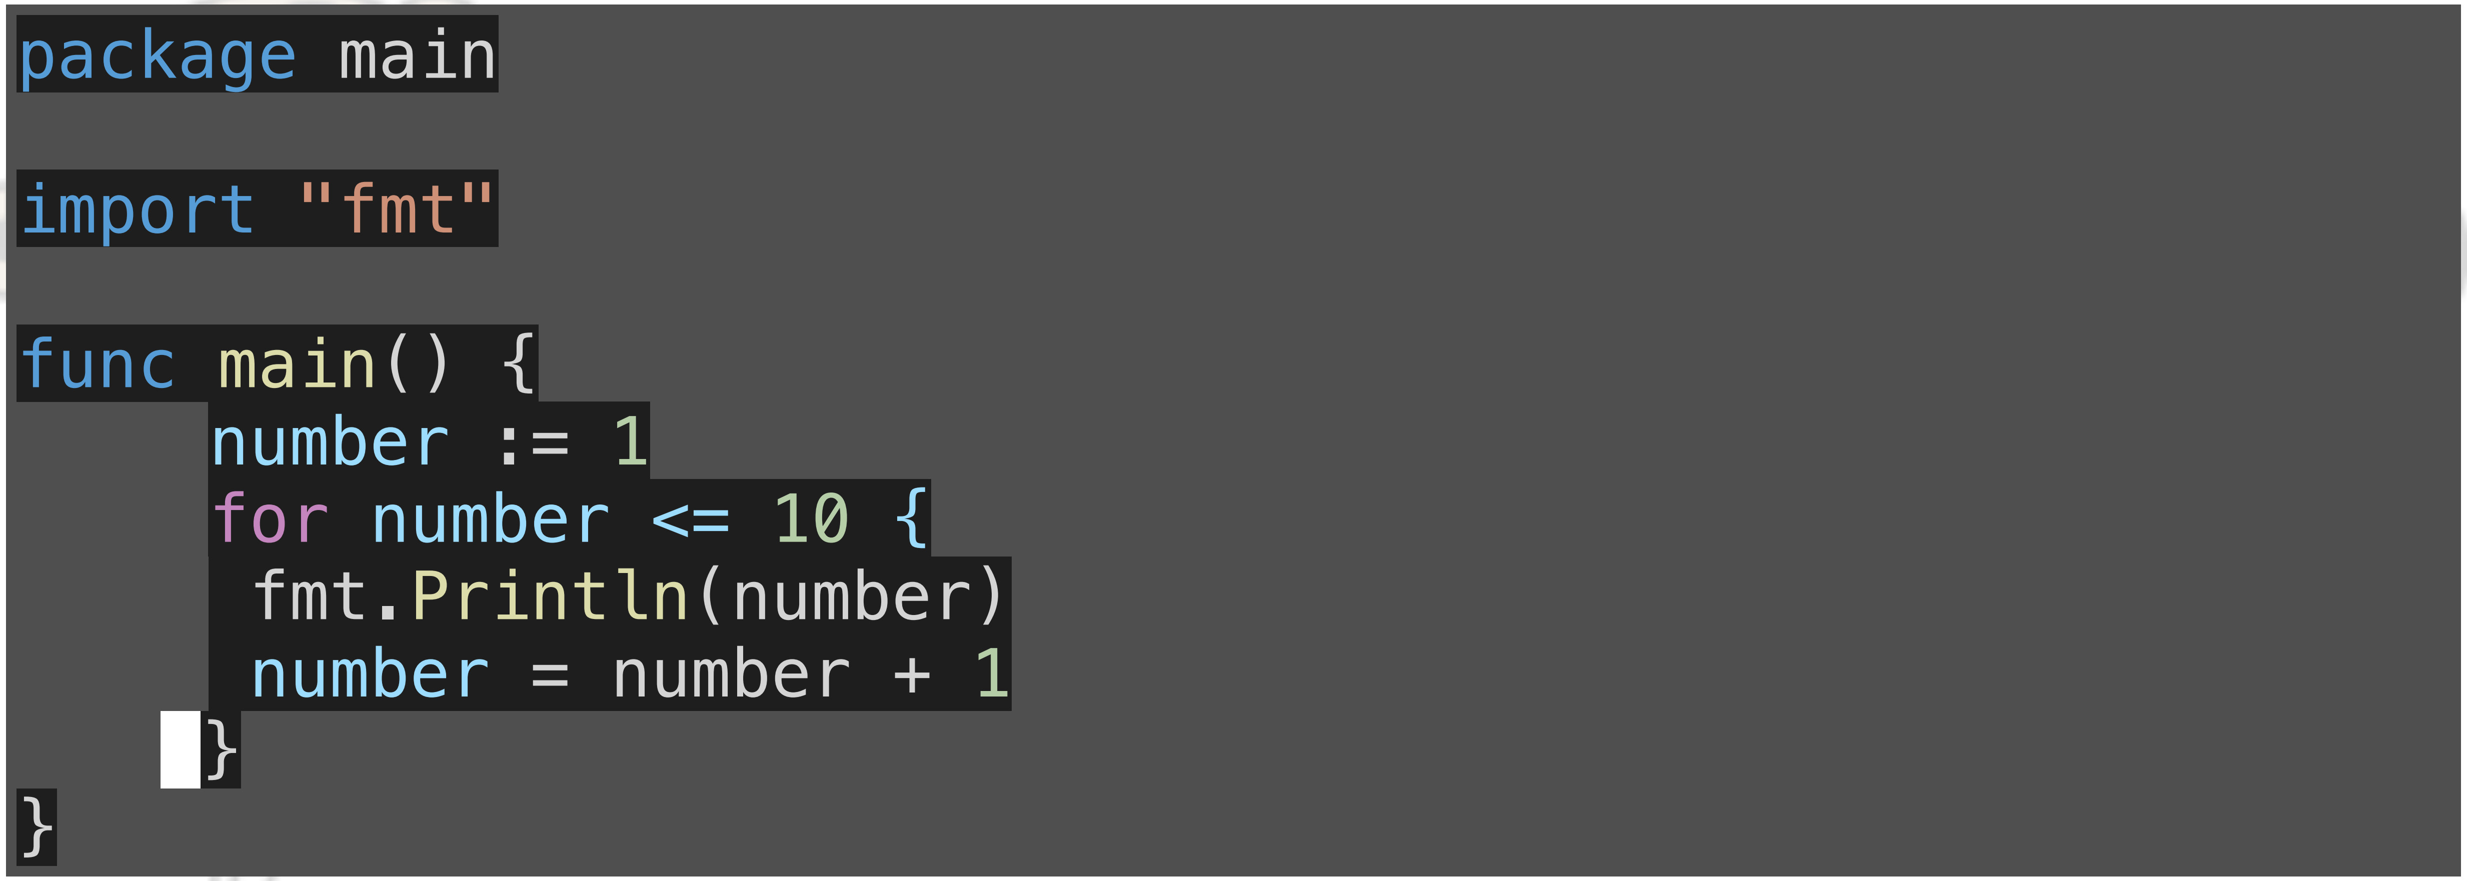
```
package main

import "fmt"

func main() {
	fmt.Println(“1”)
	fmt.Println(“2”)
	fmt.Println(“3”)
	fmt.Println(“4”)
	fmt.Println(“5”)
	fmt.Println(“6”)
	fmt.Println(“7”)
	fmt.Println(“8”)
	fmt.Println(“9”)
	fmt.Println(“10”)

}
```

golang : Conditions [for]



```
package main

import "fmt"

func main() {
     number := 1
     for number <= 10 {
      fmt.Println(number)
      number = number + 1
    }
}
```

golang : Conditions [if]

create main.go in folder chapter5-2 :

```go
package main

import "fmt"

func main() {
  for number := 1; number <= 100; number++ {
      if number%15 == 0 {
        fmt.Println(number, "FizzBuzz")
      } else if number%3 == 0 {
        fmt.Println(number, "Fizz")
      } else if number%5 == 0 {
        fmt.Println(number, "Buzz")
      } else {
        fmt.Println(number)
      }
  }
}
```

golang : Conditions [switch case]

create main.go in folder chapter5-3 :

```go
package main

import "fmt"

func main() {
    switch i := 5 {
        case 0:
          fmt.Println("Zero")
        case 1:
          fmt.Println("One")
        case 2:
          fmt.Println("Two")
        case 3:
          fmt.Println("Three")
        case 4:
          fmt.Println("Four")
        case 5:
          fmt.Println("Five")
        default:
          fmt.Println("Unknown Number")
      }
}
```

Exercise

create exercise.go in folder chapter5-4 :

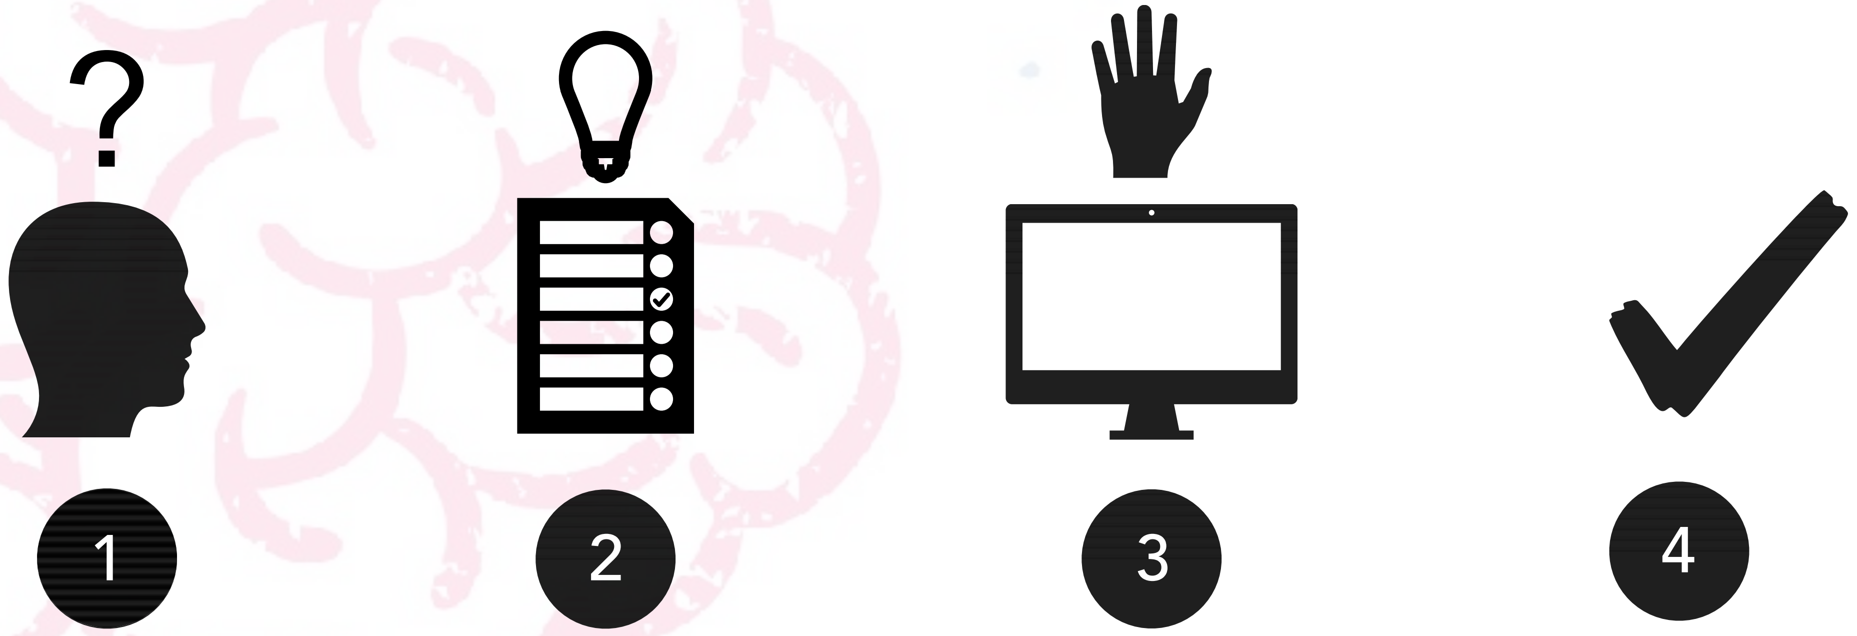
โปรแกรมจะให้ใส่ตัวเลขได้ไม่เกิน 5 ครั้ง

ถ้าเจอตัวเลขที่สุ่มมาจะแสดงคำว่า เจอแล้ว และจบการทำงาน

ถ้าเลขที่ใส่มากกว่าจะแสดงคำว่า มากไป

ถ้าเลขที่ใส่น้อยกว่าจะแสดงคำว่า น้อยไป

ถ้าใส่เกิน 5 ครั้งจะแสดงคำว่า เกินพอ และจบการทำงาน



run -> no error -> push to your git repository

function

golang : function

```go
package main

func main() {
}

func f() {
}

func fWithReturn(i int) int {
    return i
}

func fWithMultipleReturn(i int, s string) (int, error) {
    return i, nil
}
```

golang : function

create main.go in folder chapter6-1 :

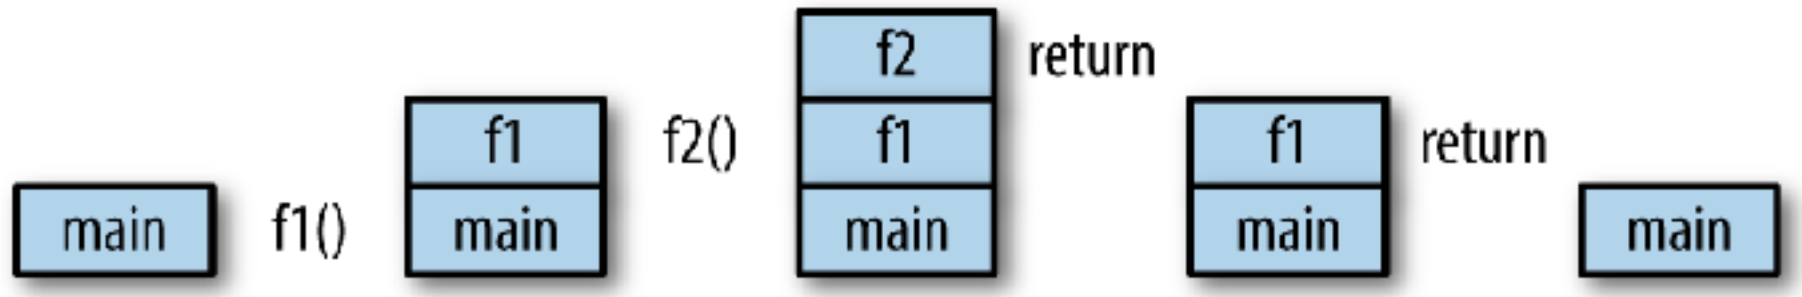
```go
package main

import "fmt"

func main() {
    fmt.Println(f1())
}

func f1() int {
    return f2()
}

func f2() int {
    return 1
}
```



golang : function

create main.go in folder chapter6-2 :

```
package main

import "fmt"

func main() {
    fmt.Println(f2())
}

func f2() (r int) {
    r = 1
    return
}
```

Return types can have names

golang : function

create main.go in folder chapter6-3 :

```go
package main

import "fmt"

func main() {
    x, y := f()
    fmt.Println(x, y)
}

func f() (int, int) {
    return 5, 7
}
```

Multiple values can be returned

golang : function

create main.go in folder chapter6-4 :

```go
package main

import "fmt"

func main() {
    fmt.Println(add(1,2,3))

    xs := []int{1,2,3}
    fmt.Println(add(xs...))
}

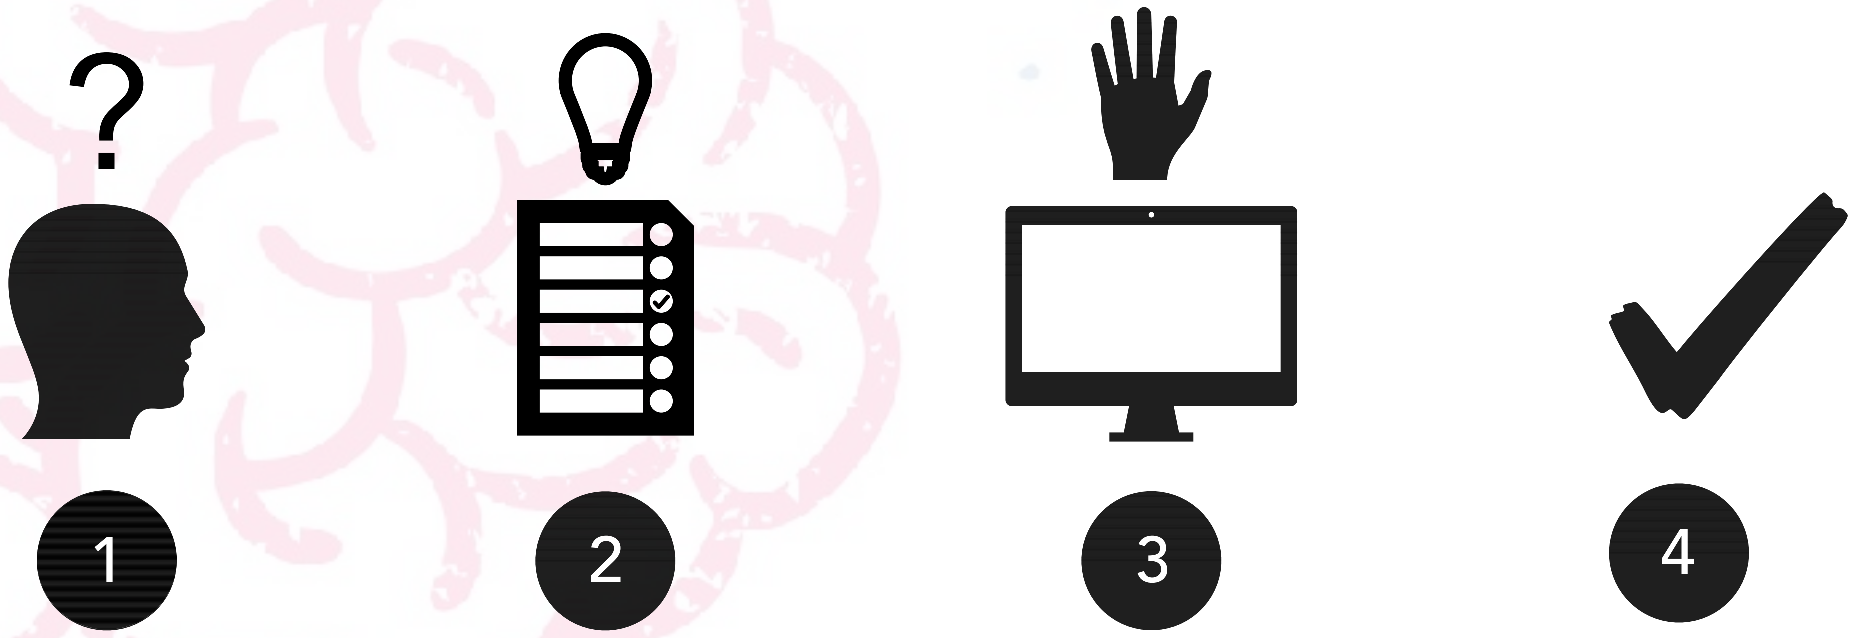
func add(args ...int) int {
    total := 0
    for _, v := range args {
        total += v
    }
    return total
}
```

Variadic Function

Exercise

create exercise.go in folder chapter6-5 :

REFACTOR FIZZBUZZ ใน CHAPTER5-2
ให้เรียกใช้งาน FUNCTION
แทนที่จะทำงานทุกอย่างใน FUNC MAIN



run -> no error -> push to your git repository

Collections:

Arrays, Slices, Map

golang : collections

```
func main() {
    var x [5]int // array
    var x []int // slice
    var x map[string]int // map
}
```

golang : arrays

create main.go in folder chapter7-1 :

```go
package main

import "fmt"

func main() {
    var x [5]int
    x[3] = 4
    fmt.Println(x)

    x = [5]int{1, 2, 3, 4, 5}
    fmt.Println(x)

    y := [...]int{1, 2, 3, 4, 5, 6, 7, 8, 9, 0}
    fmt.Println(y)
}
```

golang : slice

create main.go in folder chapter7-2 :

```go
package main

import "fmt"

func main() {
    slice := make([]int, 3)
    slice[0] = 1
    slice[1] = 2
    slice[2] = 3

    fmt.Println(slice)

    slice2 := []int{1, 2, 3, 4, 5}
    fmt.Println(slice2)

    fmt.Println("Slice with length and capacity")
    fmt.Printf("slice: length %v, capacity %v, %v\n", len(slice), cap(slice), slice)

    // append
    for i := 4; i < 15; i++ {
        slice = append(slice, i)
    }
    fmt.Printf("slice: length %v, capacity %v, %v\n", len(slice), cap(slice), slice)
}
```

golang : slice

create main.go in folder chapter7-3 :

```go
package main

import "fmt"

func main() {
    arr := [5]int{1, 2, 3, 4, 5}
    fmt.Println(arr)

    slice := arr[0:3]
    fmt.Println(slice)
}
```

Create slice from array

golang : slice

create main.go in folder chapter7-4 :

```go
package main

import "fmt"

func main() {
    slice := []int{1, 2, 3}
    fmt.Println(slice)
    newSlice := make([]int, 2)
    fmt.Println(newSlice)
    copy(slice, newSlice)
    fmt.Printf("slice: %v\n", slice)
    fmt.Printf("slice: %v\n", newSlice)
}
```

Copy slices

golang : map

create main.go in folder chapter7-5 :

```
package main

import "fmt"

func main() {
    var x map[string]int
    x = make(map[string]int)
    x["key"] = 10
    fmt.Println(x)
    fmt.Println(x["key"])

    y := map[string]int{
        "one":   1,
        "two":   2,
        "three": 3,
    }
    fmt.Println(y)
}
```

golang : map

create main.go in folder chapter7-6 :

```go
package main

import "fmt"

func main() {
    x := map[string]int{
        "one":   1,
        "two":   2,
        "three": 3,
    }
    fmt.Println(x)

    delete(x, "two")
    fmt.Printf("After delete: %v\n", x)
}
```

Delete map

golang : map

create main.go in folder chapter7-7 :

```go
package main

import "fmt"

func main() {
    mymap := make(map[int]int)
    mymap[1] = 1
    mymap[2] = 2

    fmt.Println(mymap[3])
    if mymap[3] != 0 {
        fmt.Println(mymap[3])
    }

    // ok?
    if value, ok := mymap[3]; ok {
        fmt.Println(value)
    }
}
```

Avoid to check zero value

golang : range and collections

create main.go in folder chapter7-8 :

```go
package main

import "fmt"

func main() {
	numbers := [5]int{1, 2, 3, 4, 5}
	for i := 0; i < len(numbers); i++ {
		fmt.Println(i, numbers[i])
	}
	fmt.Println("With Range")
	for i, number := range numbers {
		fmt.Println(i, number)
	}
}
```

Range: Array

golang : range and collections

create main.go in folder chapter7-9 :

```go
package main

import "fmt"

func main() {
    slice := []int{1, 2, 3, 4, 5}
    for i, number := range slice {
        fmt.Println(i, number)
    }
}
```

Range: Slice

golang : range and collections

create main.go in folder chapter7-10 :

```
package main

import "fmt"

func main() {
    maps := map[string]int{
        "one":   1,
        "two":   2,
        "three": 3,
    }

    for key, number := range maps {
        fmt.Println(key, number)
    }
}
```

Range: Map

golang : range and collections

create main.go in folder chapter7-11 :

```go
package main

import "fmt"

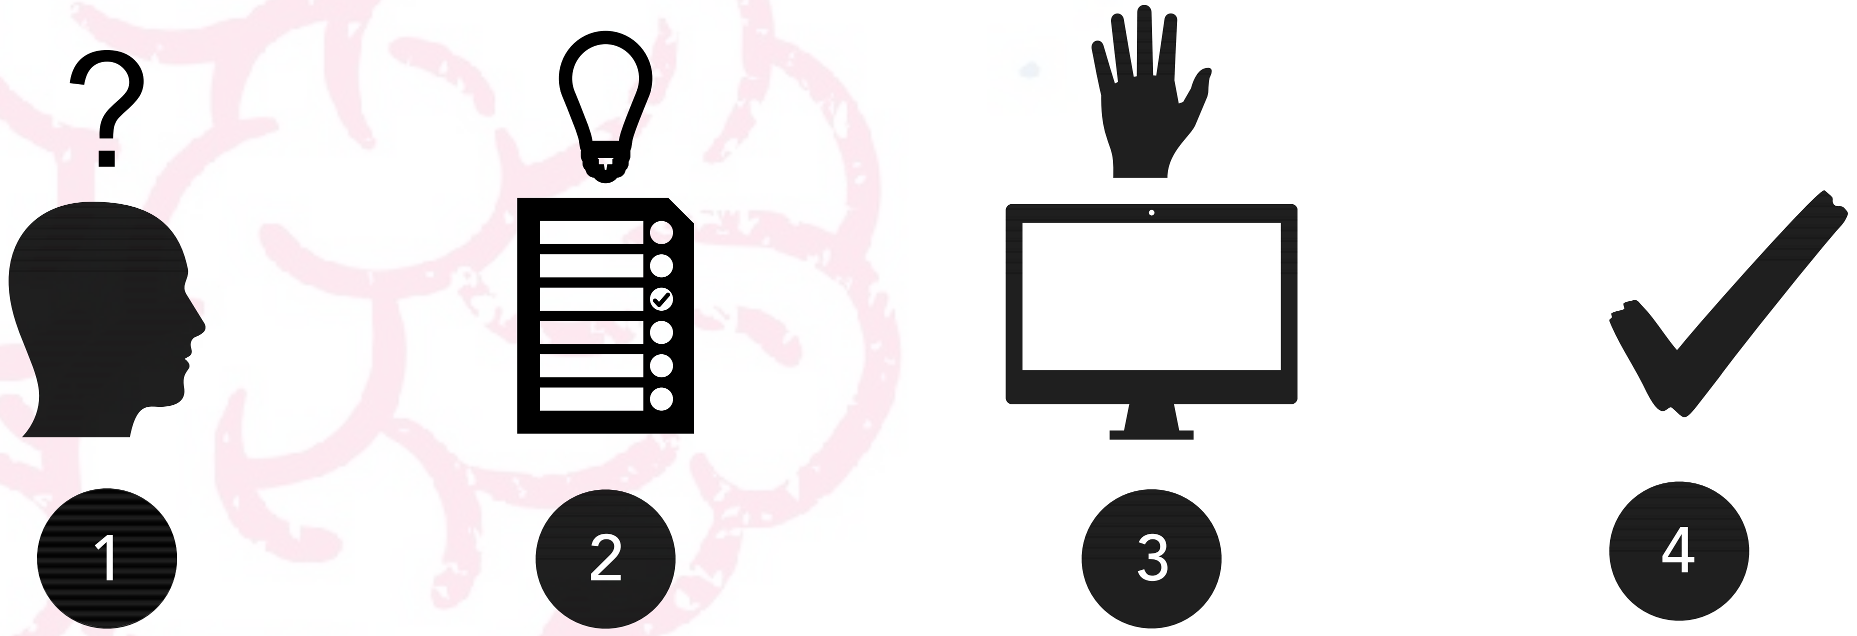
func main() {
	for i, c := range "golang" {
		fmt.Println(i, c)
		fmt.Printf("%v\n", string(c))
	}
}
```

Range: String

Exercise

create exercise.go in folder chapter6-5 :

REFACTOR FIZZBUZZ ใน CHAPTER5-2
โดยใช้ TYPE ประเภท COLLECTION ของ GO
มาแทนที่เพื่อลด DUPLICATION ใน CODE



run -> no error -> push to your git repository

Sum up

Type: string, int, float, bool

Operation: string: +

int, float: +, -, *, /, %

convert: string: string(**rune**), string(**int**)

int: int(**rune**), int(**str**)

strconv.**Atoi**(**str**), strconv.**Itoa**(**num**)

collection: array, slice, map

Operation: slice: append(slice, value)

Sum up

control structure: if, for

example:

```
for {…}
for i:=0; i < len; i++ {…}
for index, value := range collection {…}
for index, value := range string {…}
```

fmt:

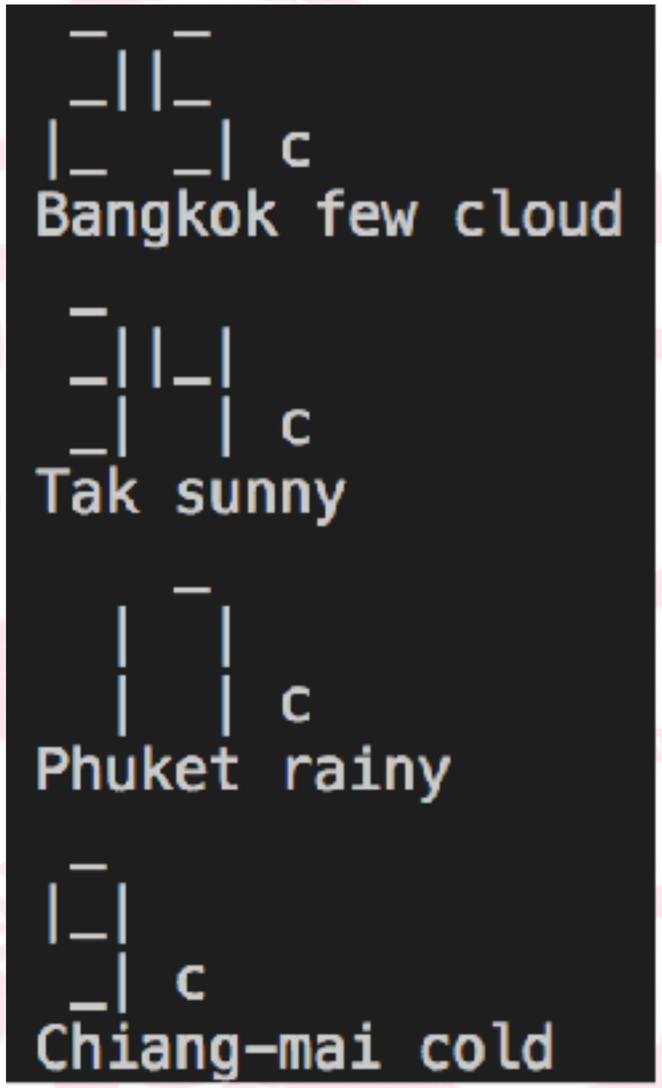
example:

```
fmt.Printf(“%v %t %d %f %s”, num, num, num, float, str)
fmt.Println(num, num, num, float, str)
fmt.Sprintf(“%v %t %d %f %s”, num, num, num, float, str)
```

Exercise

create console-weather.go in folder exercise :

แสดงผลอุณหภูมิผ่าน TERMINAL โดยมีรูปแบบดังนี้

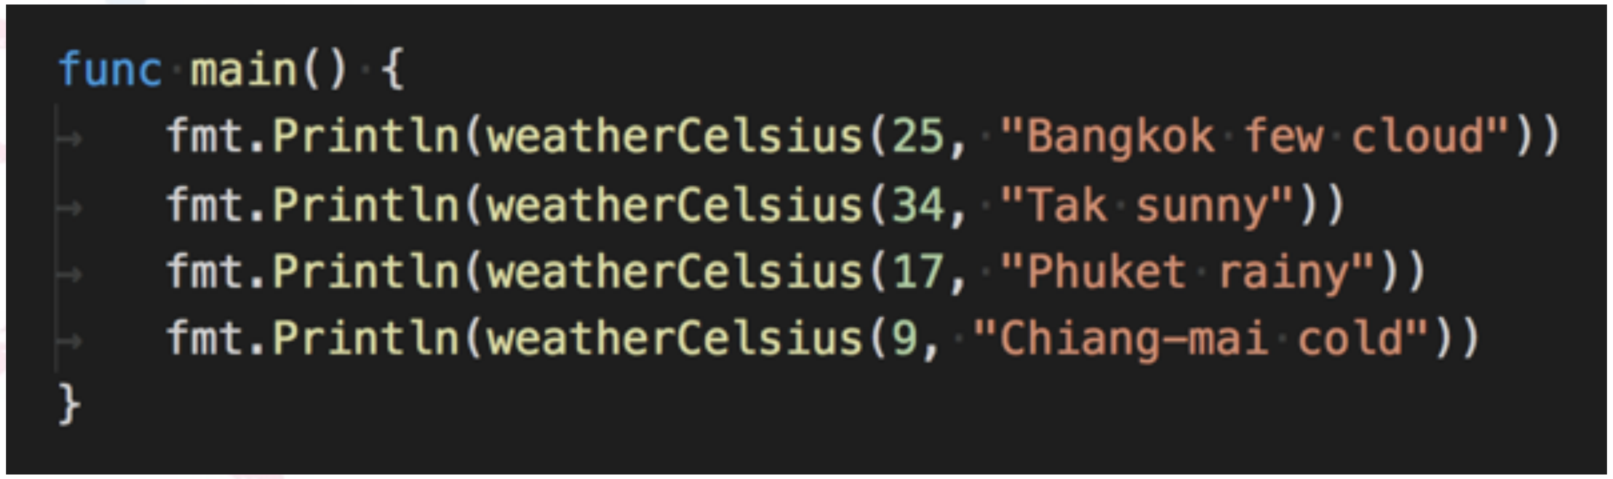


```
 _  _
 _||_
|_  _| c
Bangkok few cloud

 _
 _||_|
 _|  | c
Tak sunny

    _
  |  |
  |  | c
Phuket rainy

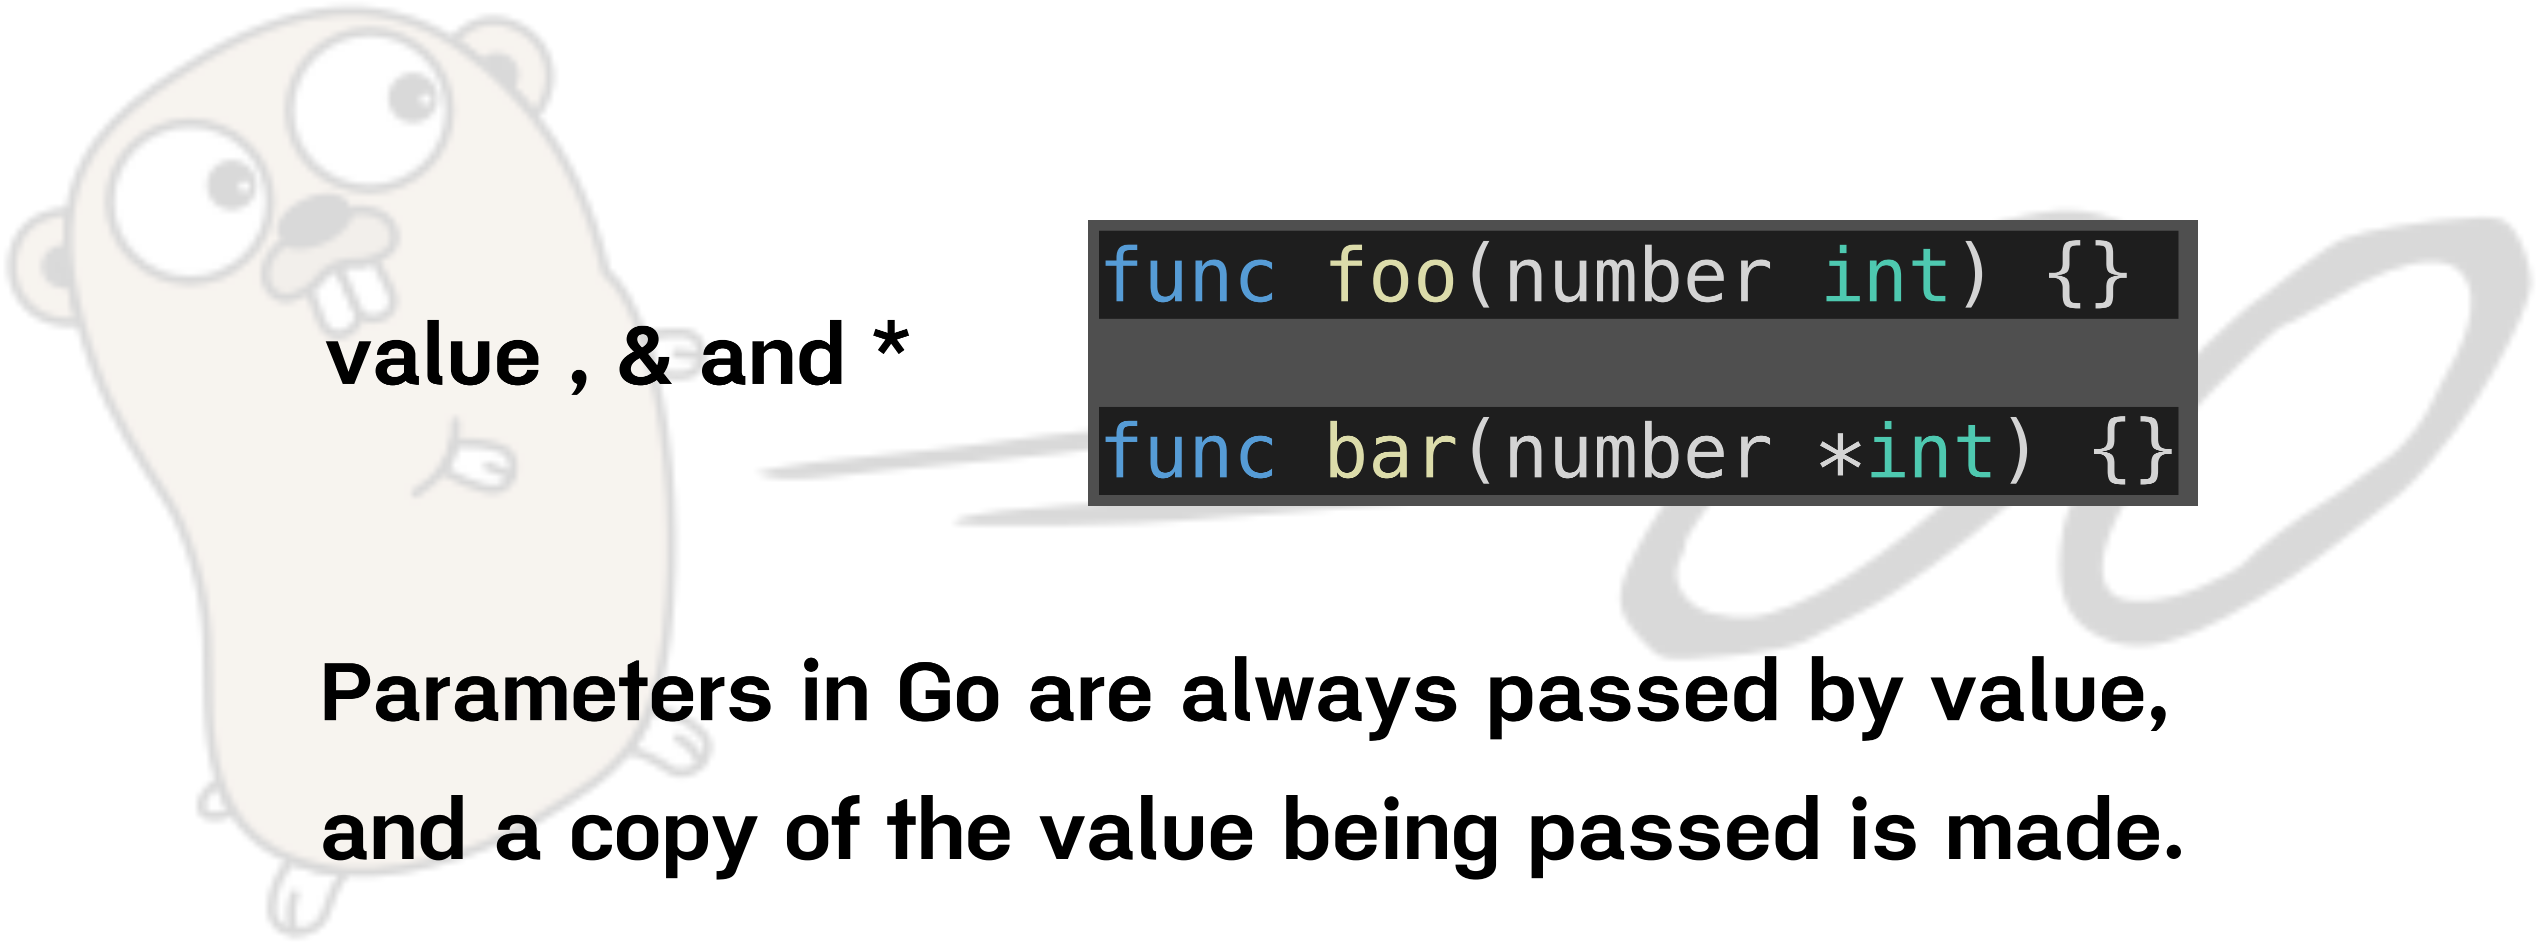
 _
|_|
 _| c
Chiang-mai cold
```



```go
func main() {
	fmt.Println(weatherCelsius(25, "Bangkok few cloud"))
	fmt.Println(weatherCelsius(34, "Tak sunny"))
	fmt.Println(weatherCelsius(17, "Phuket rainy"))
	fmt.Println(weatherCelsius(9, "Chiang-mai cold"))
}
```

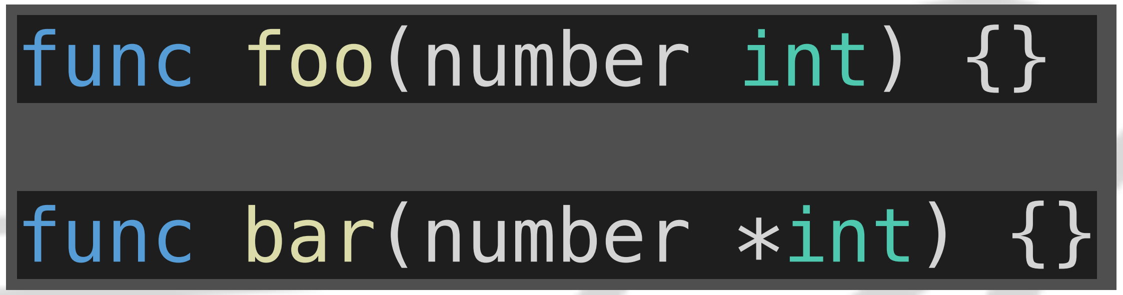
run -> no error -> push to your git repository

Pointers



Pointer

value , & and *



```
func foo(number int) {}

func bar(number *int) {}
```

Parameters in Go are always passed by value, and a copy of the value being passed is made.

golang : pass by copy value

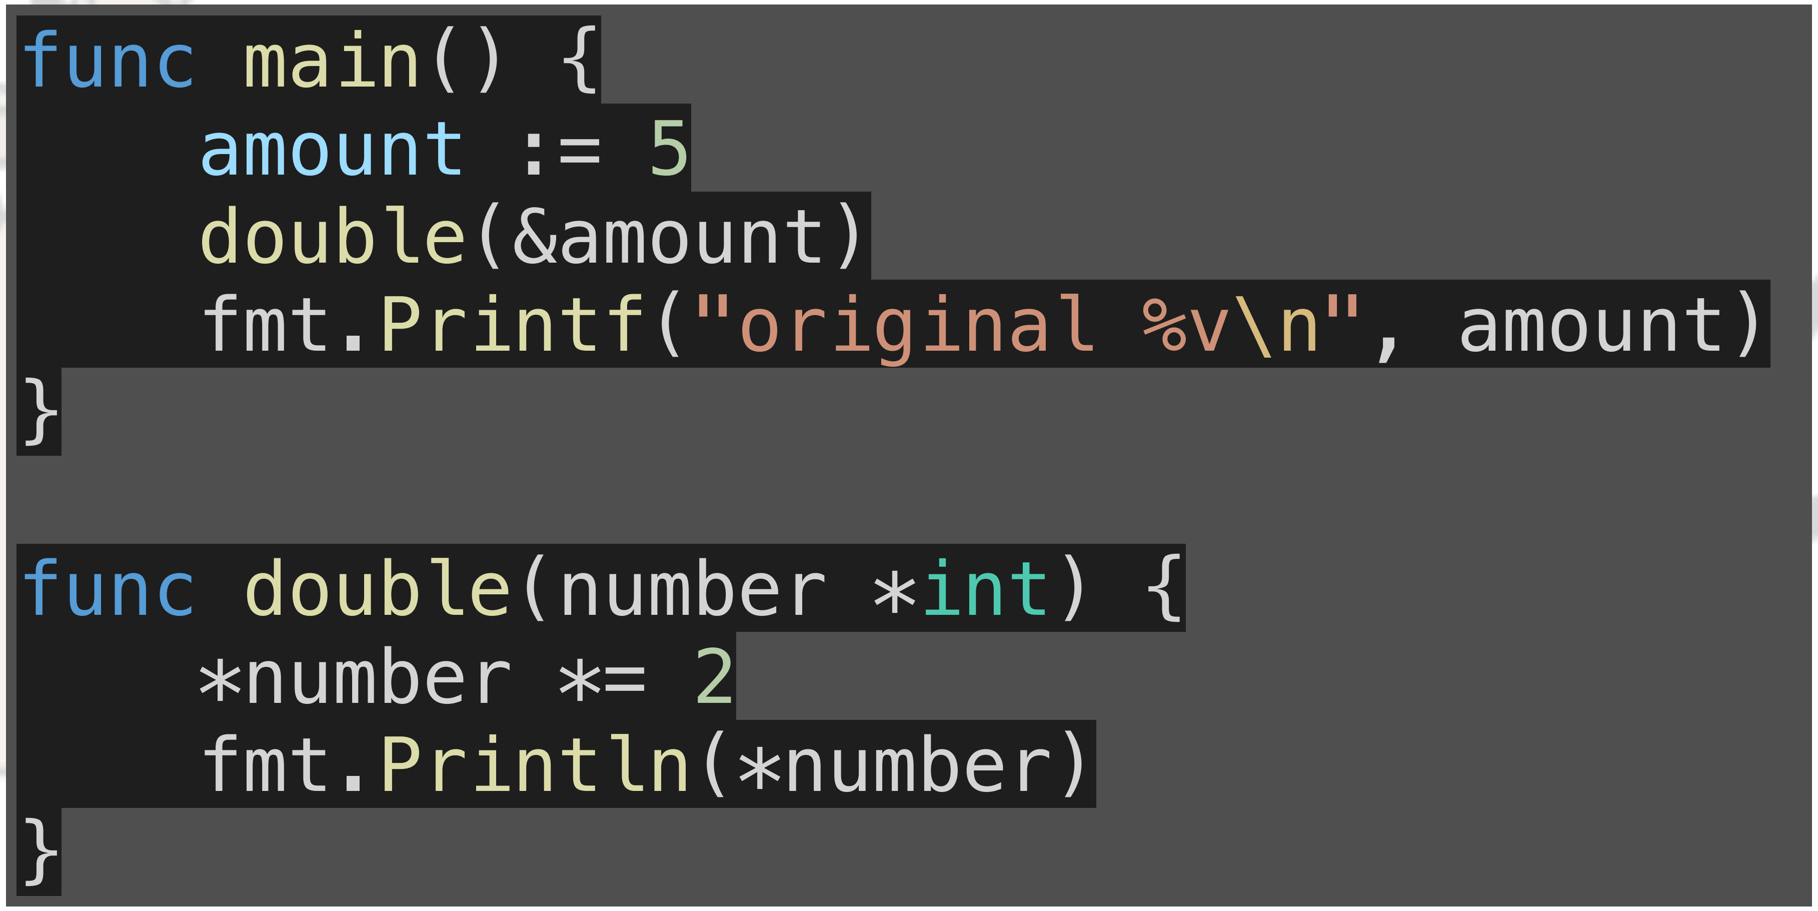
create main.go in folder chapter8-1 :

```go
func main() {
    amount := 5
    double(amount)
    fmt.Printf("original %v\n", amount)
}

func double(number int) {
    number *= 2
    fmt.Println(number)
}
```

golang : pass by pointer

create main.go in folder chapter8-2 :



```go
func main() {
    amount := 5
    double(&amount)
    fmt.Printf("original %v\n", amount)
}

func double(number *int) {
    *number *= 2
    fmt.Println(*number)
}
```

When you pass a pointer, the pointer value will be copied and passed.

golang : pass by array value

create main.go in folder chapter8-3 :

```go
func main() {
    array := [3]int{1, 2, 3}
    double(array)
    fmt.Printf("origin addr %p\n", &array)
    fmt.Printf("original %v\n", array)
}

func double(nums [3]int) {
    fmt.Printf("double addr %p\n", &nums)
    for i := range nums {
        nums[i] *= 2
    }
    fmt.Println(nums)
}
```

golang : pass by array pointer

create main.go in folder chapter8-4 :

```go
func main() {
    array := [3]int{1, 2, 3}
    double(&array)
    fmt.Printf("origin addr %p\n", &array)
    fmt.Printf("original %v\n", array)
}

func double(nums *[3]int) {
    fmt.Printf("double addr %p\n", nums)
    fmt.Printf("double value %v\n", *nums)
    for i := range *nums {
        nums[i] *= 2
    }

    fmt.Println(*nums)
}
```

golang : pass by slice value

create main.go in folder chapter8-5 :

```go
func main() {
    slice := []int{1, 2, 3}
    double(slice)
    fmt.Printf("origin addr %p\n", slice)
    fmt.Printf("original %v\n", slice)
}

func double(nums []int) {
    fmt.Printf("double addr %p\n", nums)
    for i := 0; i < len(nums); i++ {
        nums[i] *= 2
    }

    fmt.Println(nums)
}
```

golang : pass by map value

create main.go in folder chapter8-6 :

```go
func main() {
    m := map[int]int{1:1, 2:2, 3:3,}
    double(m)
    fmt.Printf("origin addr %p\n", m)
    fmt.Printf("original %v\n", m)
}

func double(nums map[int]int) {
    fmt.Printf("double addr %p\n", nums)
    for i := range nums {
        nums[i] *= 2
    }

    fmt.Println(nums)
}
```

Type

golang : struct type

create main.go in folder chapter9-1 :

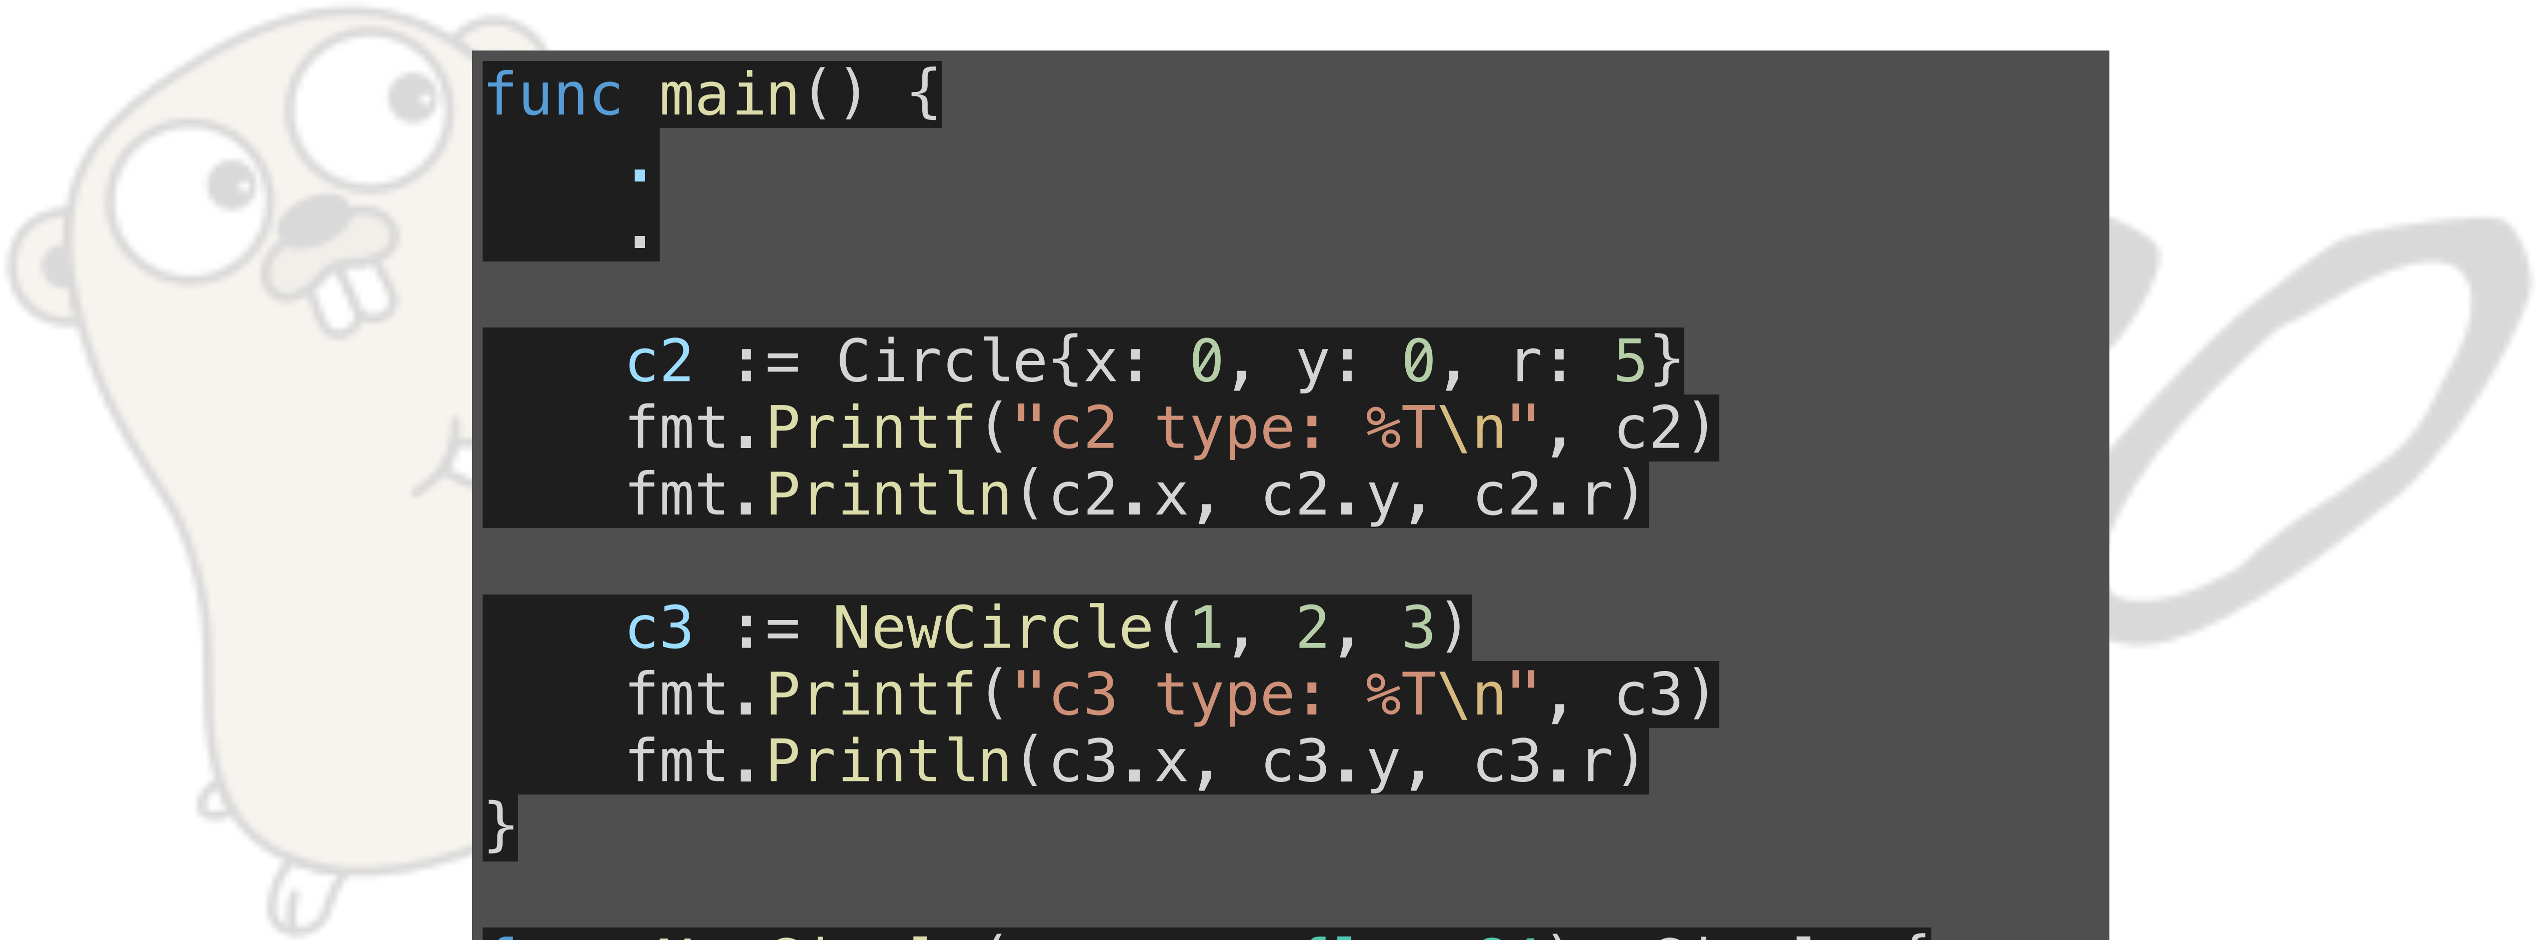
```go
type Circle struct {
    x float64
    y float64
    r float64
}

func main() {
    var c Circle
    fmt.Printf("c type: %T\n", c)
    fmt.Println(c.x, c.y, c.r)

    c1 := new(Circle)
    fmt.Printf("c1 type: %T\n", c1)
    fmt.Println(c1.x, c1.y, c1.r)
}
```

golang : struct type

create main.go in folder chapter9-1 :



```
func main() {
        .
        .

    c2 := Circle{x: 0, y: 0, r: 5}
    fmt.Printf("c2 type: %T\n", c2)
    fmt.Println(c2.x, c2.y, c2.r)

    c3 := NewCircle(1, 2, 3)
    fmt.Printf("c3 type: %T\n", c3)
    fmt.Println(c3.x, c3.y, c3.r)
}

func NewCircle(x, y, r float64) *Circle {
    return &Circle{x, y, r}
}
```

golang : specific type

create main.go in folder chapter9-2 :

```
type Zipcode string

func main() {
	zipcode := Zipcode("11000")
	if zipcode.valid() {
		fmt.Println(zipcode)
	}
}

func (z Zipcode) valid() bool{
	return true
}
```

Method

golang : method

create main.go in folder chapter10-1 :

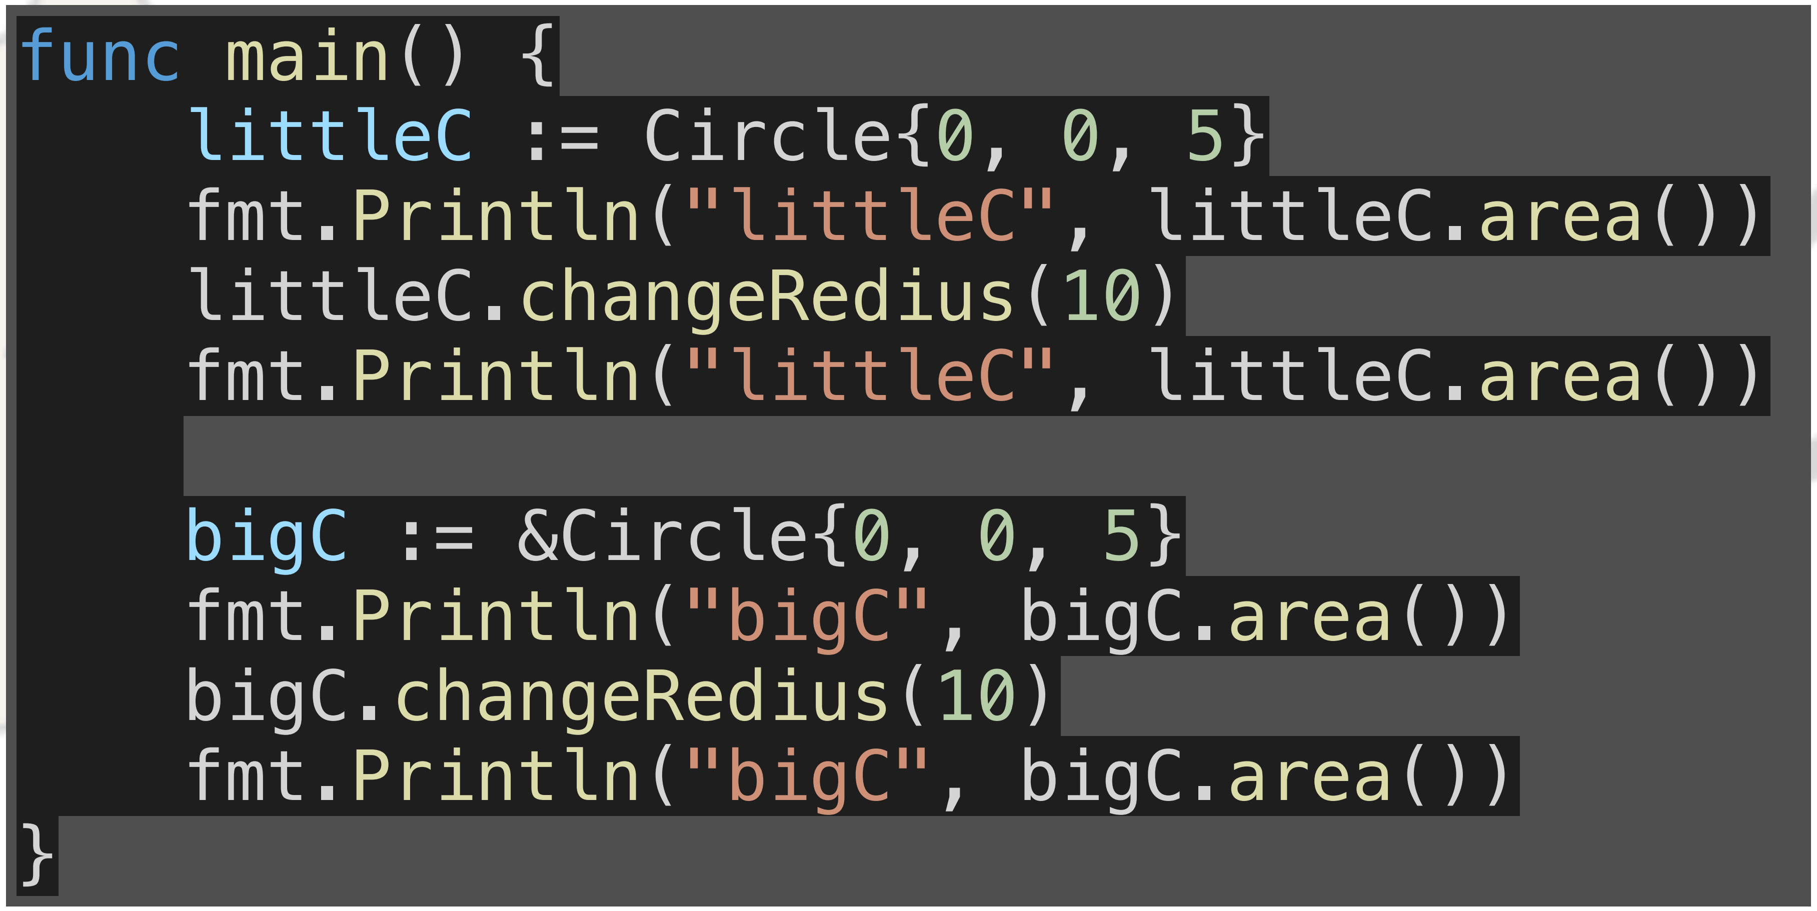
```
type Circle struct {
    x float64
    y float64
    r float64
}

func (c Circle) area() float64 {
    return math.Pi * c.r * c.r
}

func (c *Circle) changeRedius(r float64) {
    c.r = r
}
```

golang : method

create main.go in folder chapter10-1 :



```go
func main() {
	littleC := Circle{0, 0, 5}
	fmt.Println("littleC", littleC.area())
	littleC.changeRedius(10)
	fmt.Println("littleC", littleC.area())

	bigC := &Circle{0, 0, 5}
	fmt.Println("bigC", bigC.area())
	bigC.changeRedius(10)
	fmt.Println("bigC", bigC.area())
}
```

Interface

golang : interface

create main.go in folder chapter11-1 :

```go
type Rectangle struct {
    w float64
    h float64
}

func (r Rectangle) area() float64 {
    return r.w * r.h
}

type Circle struct {
    x float64
    y float64
    r float64
}

func (c *Circle) area() float64 {
    return math.Pi * c.r * c.r
}
```

golang : interface

create main.go in folder chapter11-1 :

```go
type measure interface {
    area() float64
}

func printArea(m measure) {
    fmt.Println(m.area())
}

func main() {
    c := &Circle{0, 0, 5}
    printArea(c)

    r := Rectangle{3, 4}
    printArea(r)
}
```

Exercise

create vending-machine.go in folder exercise :

```
Vending Machine
Coin: TEN(10), Five(5), TWO(2), ONE(1)
      T        F        TW      O

Item: Soft Drink(18),
      Canned Coffee(12),
      Drinking Water(7)

Coin Return: returns all inserted money

#Criteria
Unlimited items
Unlimited change
Currently inserted money
```

run -> no error -> push to your git repository

Exercise

vending-machine: Test Cases

```
1. Buy SD(soft drink) with exact change
Insert: T, F, TW, O
Currently inserted money: 18
Choose: Select SD
Return: SD

2. Start adding change but hit coin return
Insert: T, T, F
Currently inserted money: 25
Choose: Coin Return
Return: T, T, F

3. Buy CC(canned coffee) without exact change
Insert: T, T
Currently inserted money: 20
Choose: Select CC
Return: CC, F, TW, O
```

run -> no error -> push to your git repository

Exercise

vending-machine:

```
func main() {
    vm := NewVendingMachine(coins, items)

    // Buy SD(soft drink) with exact change
    vm.InsertCoin("T")
    vm.InsertCoin("F")
    vm.InsertCoin("TW")
    vm.InsertCoin("O")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney())
    // 18
    can := vm.SelectSD()
    fmt.Println(can) // SD
    .
    .
    .

Exercise

vending-machine:

```
func main() {
    vm := NewVendingMachine(coins, items)

    .
    .
    .
    // Buy CC(canned coffee) without exact change
    vm.InsertCoin("T")
    vm.InsertCoin("T")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney())
    // 20
    can = vm.SelectCC()
    fmt.Println(can) // CC, F, TW, O
    .
    .
    .
}
```

run -> no error -> push to your git repository

Exercise

vending-machine:

```
func main() {
    vm := NewVendingMachine(coins, items)

    .
    .
    .
    // Start adding change but hit coin return
    vm.InsertCoin("T")
    vm.InsertCoin("T")
    vm.InsertCoin("F")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney())
    // 25
    change := vm.CoinReturn()
    fmt.Println(change) // T, T, F
}
```

run -> no error -> push to your git repository

Exercise

vending-machine:

```go
func main() {
    vm := NewVendingMachine(coins, items)

    // Buy SD(soft drink) with exact change
    vm.InsertCoin("T")
    vm.InsertCoin("F")
    vm.InsertCoin("TW")
    vm.InsertCoin("O")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney()) // 18
    can := vm.SelectSD()
    fmt.Println(can) // SD

    // Buy CC(canned coffee) without exact change
    vm.InsertCoin("T")
    vm.InsertCoin("T")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney()) // 20
    can = vm.SelectCC()
    fmt.Println(can) // CC, F, TW, O

    // Start adding change but hit coin return
    vm.InsertCoin("T")
    vm.InsertCoin("T")
    vm.InsertCoin("F")
    fmt.Println("Inserted Money:", vm.GetInsertedMoney()) // 25
    change := vm.CoinReturn()
    fmt.Println(change) // T, T, F
}
```
